Santa Fe, New Mexico 87505

Re: Petition for Public Hearing to Consider Proposed Amendments to the Liquid Waste Disposal and Treatment Regulations in Title 20, Chapter 7, Part 3 of the New Mexico Administrative Code except for Section 20.7.3.904 NMAC which is the subject of a separate hearing already scheduled.

Dear Ms. Medina:

The Professional On- Site Wastewater Re-Use Association of New Mexico ("POWRA") and Link Summers, Pro Se, respectfully request a hearing before the Environmental Improvement Board ("EIB") on proposed amendments to the Liquid Waste Disposal and Treatment Regulations, 20.7.3 NMAC except for Section 20.7.3.904 NMAC. The purpose of the proposed amendments is to make corrections and adjustments to the current regulations, to clarify various provisions and to assure that the Liquid Waste Program performs its functions according to law.

POWRA and Mr. Summers seek to clarify and supplement several issues with the existing rules that need to be addressed for the public health and safety of the citizens of New Mexico. One example is the documented high strength wastewater discharged by RV parks and the absence of suitable language in the current regulation to properly address the problem. Another issue is recognizing 20.7.3 as the official code of the state of New Mexico with regard to Liquid Waste Disposal and Treatment. Proposed language addresses what the department describes as a lack of clarity concerning the responsibility for inspecting unpermitted systems. Other proposed language addresses department claims of unlimited discretion with regard to enforcement. Additional proposed language addresses failure to properly preserve and protect liquid waste permits and other

related documents that are State property and subject to the state archive law. These examples serve to illustrate some, but not all, issues that POWRA and Mr. Summers have addressed with this proposed rule change,

POWRA and Mr. Summers respectfully request that the Board consider this Petition at its regularly scheduled meeting on September 8, 2009 or in the alternative and set the proposed amended rule for hearing in December of 2009, or as soon thereafter as is practical. POWRA and Summers expect that the hearing will take approximately 3 days. Scheduling a hearing in December of 2009 or later will allow for 60 days notice to the public pursuant to NMSA 1978, §74-1-9D (1985).

The proposed amendments include:

Section 20.7.3.2 SCOPE:

Subsection A -

Add the sentence "This part, 20.7.3 NMAC, constitutes the New Mexico Liquid Waste Disposal and Treatment code for on-site liquid waste systems that are designed to receive and do receive two thousand gallons or less of liquid waste per day as authorized by 74-1-8.A(3) NMSA 1978."

Section 20.7.3.6 OBJECTIVE:

After the phrase "liquid waste disposal practices and" Add the phrase "to accurately document official actions taken by the department pursuant to the Public Records Act 14-3-1 - 23 NMSA 1978 and the Executive Records Retention and Disposition Schedule New Mexico Environment Department 1.18.667 NMAC;"

Section 20.7.3.7: DEFINITIONS:

Subsection A –

(1) Definition of "absorption area" amended to insert the words "below the invert of the pipe" after the words "infiltrative surface".

(2) Definition of "advanced treatment" amended to insert the phrase "Advanced treatment systems include systems that provide secondary treatment, tertiary treatment, and disinfection. Approved advanced treatment units appear on the approved product list on the new mexico environment department website www.nmenv.state.nm.us." after the words "advanced treatment may include physical or chemical processes; "

(3) Definition of "aggregate" amended to insert the phrase "except for approved proprietary aggregate and tire chips" after the words "35% void space under field conditions;"

(4) Definition of "alternative disposal" amended to insert the phrase "alternating drainfields and alternating beds, split flow systems, subsurface drip disposal, low pressure pipe, and timed and untimed" after the words "evapotranspiration beds," and before the words "pressure dosed systems;"

(6) Definition of "approved"

(c) amended to insert the phrase "offer on site liquid waste consulting services," after the words "authorized by the department to"; and insert the word "repair," after the word "design".

Subsection C -

(2) Definition of "certificate of registration"

Amended to insert the phrase "A "certificate of registration" is an official record and property of the State of New Mexico which is subject to the Public Records Act 14-3-1 - 23 NMSA 1978 and the Executive Records Retention and Disposition Schedule New Mexico Environment Department 1.18.667 NMAC;" after the words "unpermitted on-site liquid waste system;"

(11) Definition of "contractor"

Amended to insert "contractor" for the purposes of 20.7.3 NMAC is anyone holding a current, valid MM98, MM1, MS1, or MS3 license issued by the construction industries division of the Regulation and licensing department of the State of New Mexico.

(11), and (12) amended to be renumbered (12) and (13) respectively.

Subsection D -

(2) Definition of "department"

Amended to insert "Secretary of the New Mexico" after the words "means the"; and add the phrase "or his lawful designee pursuant to 9-7A-6 B.1,2,9,10, and 11;" after the words "environment department".

(4) Insert new number

(4) Definition of "discretion"

Add the following definition for the word "discretion" - "discretion" means the limited power of designated department personnel to make various decisions based on his/her opinion within general legal guidelines. Discretion regarding any part of 20.7.3 must be signed and in writing and may only be exercised by District Managers with signed, written concurrence of the Bureau Chief. Discretionary decisions that are clearly unreasonable, erroneous, or arbitrary and not justified by the facts or the law are prohibited."

(4), (5), (6), and (7) amended to be renumbered (5), (6), (7), and (8) respectively.

Subsection E -

(8) Definition of "experimental system"

Amended to delete the phrase "at the discretion" and Insert the phrase "based on the recommendation of the WTAC and shall be signed" after the words "shall be"; delete the word "of" and insert the word "by" after the new word "signed" and before the word "secretary".

Subsection I -

(4) Definition of "inspector"

Add the phrase "after completing an nationally recognized, approved course of instruction and passing an approved qualifying;" after the words "on-site liquid waste systems".

Subsection K -

(1) Insert new number (1)

(1) Definition of "kennel"

Add the following definition for the word) "kennel" means a facility where more than four (4) dogs and cats or other non-livestock domesticated animals are bred, trained, or boarded.

Subsection L -

(5) Definition of "liquid waste"

Amended to insert the phrase "liquid waste includes nonhuman animal excreta and other animal waste but shall be treated in a separate, properly - designed liquid waste treatment unit dedicated to the treatment of that waste only;" after the words " dish-washing machines and floor drains;" and before the words " liquid waste also includes non-water carried wastes" and amended to insert the phrase "funeral home process discharges" after the words " roof drainage," and before the words " mine or mill tailings or wastes".

Subsection M -

(1) Definition of "maintenance contract"

Amended to add the word "notarized" after the words " means a" and before the words " contract between the system owner".

(4) Definition of "may"

Amended to insert the phrase "with conditions as listed in 20.7.3.7.D4" after the word " allowed".

(5) Definition of "modify"

Amended to add item

"(e) to change the name of the person or contractor who performs the site evaluation, system design, or installation of an on-site liquid waste system."

Subsection N -

(1) Definition of "nondischarging"

Amended to add

(1) "nondischarging system" means a watertight system that allows no discharge of wastewater except through evaporation or pumping. Nondischarging systems include lined evaporation, lined evapotranspiration, and holding tanks. None of the total flow nondischarging systems receive discharges into the soil to percolate into groundwater. Systems may also be nondischarging with regard to specific contaminants of concern such as nitrogen. Split flow systems that separate all blackwater from graywater may be regarded as nondischarging with regard to nitrogen and do not require laboratory testing. Split flow systems that do not separate all blackwater from graywater are discharging systems with regard to nitrogen and do require laboratory testing.

Subsection P -

(3) Definition of "permit"

Amended to add the phrase "A "permit" is an official record and property of the State of New Mexico which is subject to the Public Records Act 14-3-1 - 23 NMSA 1978 and the Executive Records Retention and Disposition Schedule New Mexico Environment Department 1.18.667 NMAC." after the word "system".

(6) Amended to insert and add a new number (6) Definition of "policy statement"

Add the following definition for the words "policy statement" - "policy statement" means any reasonable and procedural rules and regulations not authorized by 20.7.3 NMAC which the department deems necessary to carry out the duties of the liquid waste program of the Environmental Health Division. " Policy statements must be included in the next proposed rule change to 20.7.3 subsequent to the issuance of the policy statement or they become null and void as of the date of adoption of the

subsequent rule change. Policy statements may be appealed as provided in 20.7.3.406 NMAC.

(6), (7), (8), (9), (10), and (11) amended to be renumbered (7), (8), (9), (10), (11), and (12) respectively.

New (7) Definition of "primary treatment".

Amended to add the phrase "Primary treated wastewater does not exceed 150 mg/l BOD, 75 mg/l TSS, 60 mg/l total nitrogen or 60 mg/l fats, oils and grease." After the words "being treated;"

New (10) Definition of "professional engineer"

Amended to insert the phrase "and in compliance with Section 16.39.3.8. F 1-5 : On-site wastewater engineering;" after the words " Survey Practice Act" and before the words "'professional engineer" includes".

Subsection R -

(1) Definition of "repair"

Amended to add the phrase "'repair' does not include installing risers or external effluent filters." After the words " distribution box;"

Subsection S -

(5) Definition of "secretary"

Amended to insert the word "legally" after the words "or a " and before the word "designated".

Amended to insert and add a new number (13) Definition of "split flow system"

Add the following definition for the words "split flow system" -

(13) "split flow system" means a system that is a combination discharging/non-discharging system that separates the toilet and kitchen waste (black water) from the rest of the waste stream (gray water). The toilet waste and kitchen waste, containing approximately 100% of the total nitrogen load, is directed to a holding vault that must be removed by a septage pumping service. The remaining waste is discharged to a conventional septic system, evaporation system, or gray water system as described in 20.7.3.810 NMAC or 20.7.3.811 NMAC. These systems are non - discharging systems with regard to nitrogen and do not require laboratory testing when used for lot size reduction. Split flow systems that separate toilet water, but not kitchen water, from the rest of the waste stream are discharging systems with regard to nitrogen and do require laboratory testing when used for lot size reduction.

Amended to insert and add a new number (14) Definition of "structure"

Add the following definition for the words "structure" -

(14) "structure" means any constructed object for which a footing is required by the appropriate building code. Buildings and enclosures erected for the purpose of housing on - site wastewater and treatment and disposal facility components are exempt from the setback requirements of 20.7.3.302 NMAC.

(13), and (14) amended to be renumbered (15) and (16) respectively

Subsection U -

(1) Definition of "uniform plumbing code"

Amended to delete "1997" and add "2006 or currently adopted" in both places where it appears

Subsection V -

(2) Definition of "variance"

Amended to add the phrase "A "variance" is an official record and property of the State of New Mexico which is subject to the Public Records Act 14-3-1 - 23 NMSA 1978 and the Executive Records Retention and Disposition Schedule New Mexico Environment Department 1.18.667 NMAC;" after the phrase " the intent of 20.7.3 NMAC."

Section 20.7.3.8 GENERAL PROVISIONS:

B. Alternative Resources

Amended to add new numbers (9), (10), and (11)

(9) The 2006 or most recently adopted version of the uniform plumbing code, 14.11.3 NMAC and the 2006 or most recently adopted state of New Mexico plumbing code and mechanical code, 14.9.2 NMAC, or the successor versions of each as adopted by the construction industries division of the New Mexico regulation and licensing department and promulgated in the New Mexico administrative code or another applicable code as adopted by the authority having jurisdiction;

(10) "Wastewater Engineering Treatment, Disposal, and Reuse" by Metcalf & Eddy, Inc. ISBN 0-07-041690-7

(11) "Operation of Wastewater Treatment Plants Volumes 1 & 2" by EPA and the University of California ISBN 1-884701-00-0 and 1-884701-02-7

C. Amended to insert the phrase ", including printed copies of 20.7.3 NMAC and a brochure on the maintenance requirements of effluent filters," after the words " educational materials regarding on-site liquid waste systems" and before the words " available to the public and to permit applicants".

Section 20.7.3.201 PROCEDURES; GENERAL REQUIREMENTS:

B. Amend to insert the words "and approved" after the word " permitted" and before the word "enclosed"; insert the words "and approved" after the word " permitted" and before the words "liquid waste treatment unit".

C. Amend to insert the words "and approved" after the word " permitted" and before the words "liquid waste disposal system".

E. Amend to insert the phrase "except advanced treatment units that are operating in compliance with permit requirements." after the words " having jurisdiction"

F. Amend to insert the phrase "type of facility" after the words " determined on the basis" and before the words " location, lot size,"

J. Amend to delete the prefix "pre" from the word pretreatment leaving the word "treatment"; replace the phrase " the level of domestic waste" with the phrase "primary treatment levels": Replace the letter "D" with the letter "P"; insert the phrase "prior to discharging to a conventional disposal system. Monitoring of the effluent is required." after the letters "NMAC" and before the words "Existing permitted"; replace the word "receiving" with the words "permitted to receive"; replace the word "pretreatment" with the words "the level of treatment"; add the words "identified above" after the word "waste".

L. Amend to delete the word "permitted" after the words "has been a prior" and before the word "modification"; delete the word "permitted" after the words "most recent" and before the word "modification".

M. Amend to delete:

Delete (1) a water-table aquifer (includes both unconfined and semi-confined conditions) with a vadose zone thickness of 100 feet or less containing no soil or rock formation that would act as a barrier to saturated or unsaturated wastewater flow;

Delete (3) an aquifer overlain by fractured bedrock;

Amended to renumber existing (2) to be new (1) - renumber existing (4) and (5) to be new (2) and (3) respectively

Amended to insert the phrase "or other body of water" after the words "gaining stream" and before the words "impacted by".

O. Amend to replace the word "consent" with the word "assent".

(1) Amend to add the phrase "or other penalties as provided in Section 20.7.3.906 for unpermitted systems;" after the words "suspension of a permit".

P.

Chart labelled **Table 201.1: Established liquid waste design flow rates**

22. Amend to add the word "kennels**" after the word "Veterinary clinic"

Amend to add the word "or owner" after the word "practitioner"

Amend to change the number 20 to 200 before the word "kennel"

Amend to add the words "or 20" before the words "per stall"

(2) After the chart 201.1 amend to delete the prefix "pre" from the word pretreatment leaving the word "treatment"; add the phrase "to primary treatment levels as defined in Paragraph (6), Subsection P of 20.7.3.7 NMAC prior to discharging to" after the word "treatment"; delete the words "to utilizing" after the words "discharging to" and before the words "a conventional"; replace the word "treatment" with the word "disposal" after the word "conventional" and before the word "system".

Amend to add

* RV dumpstation waste shall be discharged into a separate holding tank or correctly designed advanced treatment unit.

** Non human animal waste shall not be combined with human liquid waste in the same liquid waste treatment units. It shall be treated in a separate liquid waste treatment unit.

Amended to add new letter S

S. Any on-site liquid waste system that creates a confined space as defined by OSHA shall require a variance as well as an appropriate OSHA permit if required.

Section 20.7.3.202 PROCEDURES; MODIFICATION OF EXISTING SYSTEMS:

B. Amend to insert the word "by" after the word " approved" and before the words "the department"; Amend to insert the words "utilizing ASTM, ANSI or other recognized standards."

C.

(1) Amend to delete the phrase "permitted" after the words " most recent" and before the word " modification"; Add the phrase "systems installed prior to November 1, 1973, shall meet the lot size requirements adopted in 1973 except as provided in Table 20.7.3.301.2 NMAC;" after the word "modification"

D. Amend to add the phrase "Concrete septic tanks with effluent baffles shall not be altered in any way and shall use an external effluent filter." After the words " Subsection C of 20.7.3.502 NMAC"

New E.

Add " E. Upon modification of any part of the system, an approved effluent filter shall be installed in accordance with Subsection H of 20.7.3.502 NMAC."

~~E.~~ F. Renumber existing E to become F.

G. Amend to add "changing the name on a permit of the person or contractor who performs the site evaluation, system design, or installation of an on-site liquid waste system is a modification and requires a new permit and payment of the appropriate fee"

Section 20.7.3.203 PROCEDURES; CONSTRUCTION INSPECTIONS AND TESTING:

A. Amend to replace the words "test holes may " with the words "the department may, in compliance with conditions as listed in 20.7.3.7.D4, NMAC, waive the requirement for test holes."; delete the words " be waived".

B.

(1) Amend to insert the words "installer or other" after the word "The" and before the words "person doing the work"; insert the phrase "orally or in writing" after the words words "the department" and before the words "to schedule an inspection"; add the phrase "All physical or photo inspections shall meet the minimum standards adopted by the Department appropriate for the type of inspection conducted. The Department shall publish the minimum standards on its web site. Photographic inspections without an on-site physical inspection shall not be classified by the department as 'inspections' for official reports within the department or to any agency or branch of government outside the department" after the words "submitted to the department".

(2) Amend to insert the word "physically" after the words "shall be" and before the words " inspected "; insert the word "on-site" after the word "inspected" and before the words "by the department"; add the phrase "and a department - approved homeowner installation inspection form, including pictures , shall be completed." After the words "by the department".

D. Amend to add the phrase ". The department shall keep a record of every test for water tightness and post the results of each test on its internet page of approved products under the manufacturer's name and type of product." After the words "liquid waste system".

Amend to create new Section 20.7.3.204

Section 20.7.3.204 PROCEDURES; PROHIBITIONS

Amend to add new A.

A. No owner shall allow dogs or other potentially dangerous animals to be kept caged or penned in the same area where any on-site wastewater system that requires a maintenance contract is located.

20.7.3.301 STANDARDS; LOT SIZE REQUIREMENTS:

J. Amend to add the phrase "All changes in the boundaries of a lot with an existing on-site liquid waste system permit shall be submitted to the department at the time of change." after the words " shall be submitted.

Section 20.7.3.302 STANDARDS; SETBACK REQUIREMENTS:

A. Amend to add the words "except as provided in 20.7.3.E (1) - (3) NMAC." After the words "Table 302.1" and before the words "Setback distances".

B. Amend by replacing the phrase " seasonal high water flow" with the words "defined bank".

Section 20.7.3.304 STANDARDS; PROHIBITIONS:

A. Amend by inserting the words "animal or" after the word "fertilizers," and before the words "livestock wastes".

B. Amend by inserting the phrase "other than those approved, in writing, by advanced treatment unit manufacturers," after the word "additives" and before the words "shall not be used".

C. Amend to add "C. No RV tank waste, RV dumpstation waste, drains or floor drains from animal washdown facilities, livestock, kennel waste, or other non-human generated waste shall be introduced into a residential liquid waste treatment and disposal unit."

Section 20.7.3.305 STANDARDS; WASTE INTERCEPTORS:

B. Amend to add the phrase "and design" after the word "Installation" and before the words "of such interceptors"; insert the words "or the manufacturer's recommendations," after the words "plumbing code"

E. Amend to add "E. Waste interceptors located more than 2 feet outside the building and past the clean outs are considered to be components of the liquid waste system."

F. Amend to add "Waste interceptors with effluent filters are required for all mop basins"

Section 20.7.3.307 BANDONED SEWERS AND ON-SITE LIQUID WASTE SYSTEMS:

B. Amend to replace the word "The" with the words "; or the" after the words "retaining water" and before the words "unit shall be".

C. Amend to delete the word "or" after the word "removed" and before the word "collapsed"; amend to insert the phrase "or openings created for complete filling" after the word "collapsed" and before the words "before filling".

Section 20.7.3.401 PERMITTING; GENERAL REQUIREMENTS:

C. Amend to replace the words "Once the department has developed a homeowner certification program pursuant to 20.7.3.904 NMAC, a " with the word "A"; Amend to add the phrase "The department shall not knowingly issue a permit that violates a city or county regulation issued in compliance with 74-1-14 NMSA 1978." After the words "state or federal laws".

J.

(1) Amend to insert the words "by the owner" after the words "is pumped" and before the words "and inspected"; insert the words "by the department" after the words "and inspected" and before "utilizing a department approved"; add the phrase "or most recent modification;" after the words "time of installation and".

(2) Amend to insert the phrase "is sized, as determined by probing, according to the regulations in effect at the time of installation or most recent modification, drawn and dimensioned on the inspection form" after the words "disposal system" and before the words "appears to be functioning".

K. Amend to insert the words "or modified" after the word "installed" and before the word "prior"

(1) Amend by inserting the words "by an approved department inspector utilizing a department approved inspection form" after the words "full inspection" and

before the words "and the disposal"; insert the words "probed and dimensions recorded" after the words "is sufficiently" and before the words "exposed to determine"; add the phrase "All relevant aspects of construction and materials listed above shall be noted on the department approved inspection form. Pictures shall be taken where appropriate and included with the inspection report." after the word "spacing".

(4) Amend to insert the words "bureau chief of the environmental health division of the" after the words "discretion of the" and before the word "department".

L. If the department finds that specific requirements in addition to or more stringent than those specifically provided in 20.7.3 NMAC are necessary to prevent a hazard to public health or the degradation of a body of water, the department shall issue permit conditions with more stringent requirements or additional specific requirements. Such additional or more stringent requirements may apply to system design, siting, construction, inspection, operation and monitoring and shall be in accordance with 20.7.3.402.D.

M. The installation or modification of an on-site liquid waste system shall be in accordance with the permit and all regulatory requirements of 20.7.3 NMAC. Any change from the permitted installation or modification, must receive department approval prior to implementation. An amendment to the permit shall be submitted within 7 days of the completion of the installation.

N. No person shall operate or use an on-site liquid waste system until the department has granted final approval of the system after installation or modification of the system is completed. No person shall occupy a newly constructed or transported dwelling for which an on-site liquid waste system is required until the department has granted such final approval and, if applicable, until the governmental body with authority to regulate construction has granted an occupancy permit. The department shall not grant final approval if the system as installed or modified does not meet the requirements of 20.7.3 NMAC.

O. The department may cancel a permit if the installation or modification of the on-site liquid waste system has not been completed within one (1) year after issuance. If a permit is canceled, the department shall notify the permittee of the decision in writing and the reason for cancellation and appropriate regulations cited. The notice to the permittee shall also inform the permittee of his right of appeal pursuant to 20.7.3.406 NMAC.

P. The Department shall void any permit, variance, or certificate of registration if the department determines that material information in the application is false, incomplete or inaccurate and that the correct information would have resulted in the department denying the original application. The department shall notify the permittee of the decision in writing and the reason for cancellation and appropriate regulations cited.

Q. All permits, variances, exhibits, attachments, approvals, rejections, are official documents and property of the State of New Mexico and shall be received, handled, stored, treated, preserved, and archived in accordance with the Public Records Act 14-3-1 - 23 NMSA 1978 and the Executive Records Retention and Disposition Schedule New Mexico Environment Department 1.18.667 NMAC.

R. The Department or any of its representatives shall not destroy, deface, alter or modify, in any way, any permit, certificate of registration, variance, exhibit, or attachment.

S. Department decisions involving discretion on any permit or certificate of registration regarding any requirement of 20.7.3 must be in writing and may only be exercised by District Managers with written concurrence of the Bureau Chief. The written decision shall be signed by the District Manager and Bureau Chief and becomes an attachment to the permit or certificate of registration.

Section 20.7.3.402 PERMITTING; CONVENTIONAL TREATMENT AND DISPOSAL SYSTEMS:

A

(1) Amend to replace the word "completely" with the word "reasonably"; delete the phrase "direction and approximate slope of surface;" after the word "showing" and before the inserted word "the" followed by the words "location of all present"; delete the words "retaining walls;" after the word "proposed" and before the word "arroyos"; delete the words "water supply lines," after the word "channels" and before the word "wells"; delete the words "paved areas" after the word "systems" and before the word "roadway".

(3) Amend to replace the phrase "detailed log of soil formations" with the phrase "determination of soil type and structure".

Amend to add neww (67), (7), and (8)

(6) prior to final inspection, a copy of the delivery ticket for gravel delivered to the site for pipe and gravel disposal systems.

(7) A copy of the installers appropriate, current, and valid contractor's license issued by the Construction Industries division of the Regulation and Licensing Bureau of the State of New Mexico which is limited to the following designations: MM98, MM1, MS1, and MS3.

(8) prior to final inspection a copy of all photographic inspection photos in lieu of in - person inspections conducted pursuant to 20.7.3.203.B.(1)

Amend to delete existing Sections B - E

~~B. If the department finds that specific requirements in addition to or more stringent than those specifically provided in 20.7.3 NMAC are necessary to prevent a hazard to public health or the degradation of a body of water, the department shall issue permit conditions with more stringent requirements or additional specific requirements. Such additional or more stringent requirements may apply to system design, siting, construction, inspection, operation and monitoring.~~

~~C. The installation or modification of an on-site liquid waste system shall be in accordance with the permit and all regulatory requirements of 20.7.3 NMAC. Any change from the permitted installation or modification, including a change of contractor, must receive department approval prior to implementation. An amendment to the permit shall be submitted within 7 days of the completion of the installation.~~

~~D. No person shall operate or use an on-site liquid waste system until the department has granted final approval of the system after installation or modification of the system is completed. No person shall occupy a newly constructed or transported dwelling for which an on-site liquid waste system is required until the department has granted such final approval and, if applicable, until the governmental body with authority to regulate construction has granted an occupancy permit. The department shall not grant final approval if the system as installed or modified does not meet the requirements of 20.7.3 NMAC.~~

~~E. The department may cancel a permit if the installation or modification of the on-site liquid waste system has not been completed within one (1) year after issuance or if the department determines that material information in the application is false, incomplete or inaccurate and that the correct information would have resulted in the department denying the original application. If a permit is canceled, the department shall notify the permittee of the decision in writing and the reason for cancellation and appropriate regulations cited.~~

Amend to re number existing Section

F. B Further amend new section B to add the phrase "verbally and in writing within the 5 working day time frame." after the words " administratively incomplete".

Amend to re number existing Section

G. C
Amend to re number existing Section

H. D Further amend new section D to insert the phrase "shall notify the permittee, cite the" after the words " stringent conditions applied, the" and before the words " reason for the action"; delete the word "shall" after the words " reason for the action" and before the word "refer".; insert the word "be" after the word "and" and before the word "given".

Amend to add the new letter E. "E. The department shall provide owners of conventional liquid waste treatment systems, with effluent filters, a brochure explaining the proper care and maintenance of effluent filters."

Section 20.7.3.403 PERMITTING; ADVANCED TREATMENT OR ALTERNATIVE DISPOSAL:

B.

(1) (e) Amend to add the words "at the time of permit application, property transfer" after the words "maintenance contracts" and before the words "or within 30 days; replace the word "issuance" with the word "replacement"

(2) Amend to delete the words "seepage pits"
Section 20.7.3.405 PERMITTING; VARIANCES:

E. Amend by replacing the words "clear and convincing" with the words "a preponderance of".

Amend by adding

G. A " variance " is an official record and property of the State of New Mexico which is subject to the Public Records Act 14-3-1 - 23 NMSA 1978 and the Executive Records Retention and Disposition Schedule New Mexico Environment Department 1.18.667 NMAC;

Section 20.7.3.406 PERMITTING; APPEALS:

A. Amend by inserting the word "any" after the words " dissatisfied with" and before the words " action taken by the department"; insert the phrase ", a certificate of registration" after the words " permit application" and before the words " or variance petition"; insert the phrase "or any other action taken by the department" after the words " or variance petition" and before the words " may appeal to the secretary."; insert the words "and delivered" after the words "in writing" and before the words "to the secretary"; insert the words "by registered letter return receipt requested,

delivery service with written acceptance, or in person with the secretary or his agent signing upon receipt “ after the words “to the secretary” and before the words “within 15”; replace the word "issued" with the word "received"; replace the word “received” with the word “delivered”; insert the words "has been received" after the words " of the department's action" and before the words " the decision of and before the words “to the secretary”; insert the words “ the department shall be final."

B. Amend to replace the word “received” with the word “delivered”

D Amend to insert the word “qualified” after the words “designate a “ and before the word “person”; delete the phrase “make a final decision”

F. Amend to insert the sentence However prior to the hearing, the hearing officer shall inform the parties which rules of procedure and evidence will be in effect. “ after the word “apply”; insert the words “and findings” after the word ‘decision’ and before the words“ shall be”.

**Section 20.7.3.501 DESIGN; LIQUID WASTE TREATMENT UNITS;
GENERAL:**

A. Amend to insert the phrase ", and the items included in 20.7.3.J.7.(a) and (b) NMAC listed below," after the words " structural calculations" and before the words " and such other pertinent data"; insert the sentences "Prior to certification or recertification, the department engineer shall conduct a scheduled on-site inspection of in - state septic tank manufacturing facilities at least once a year and such unannounced inspections as are needed to assure product quality and provide consumer protection. The department shall not recertify septic tanks manufactured within the state nor collect the fees for recertification unless the inspection has been performed within one year of the recertification date. The engineer performing the inspection for certification or recertification shall prepare, date and sign a written report documenting compliance with each individual requirement of 20.7.3.501." after the words " required by the department." And before the words " Plans for advanced"

B.

(4) Amend to remove the word "and" after the word "construction" and before the word " tank"; insert the phrase "and individual unit identification number" after the words " capacity in gallons" and before the words " permanently displayed"; insert the word "immediately" after the words " above the outlet pipe;"

J.

(6)(a) Amend to replace the number "3500" with the number "4000"

Amend to insert new number (7)

(7) Manufacturers of concrete septic tanks shall meet minimum requirements for concrete septic tank construction, as promulgated by the department, for effective regulation, such as:

(a) shall have in place a standardized quality assurance/quality control (QA/QC) plan.

(b) shall document in - house testing of materials and tracking of materials used in individual units manufactured

Amend to re number existing Section (7) to become (8)

(7) (8) Amend by adding the phrase "3/8 inch pea gravel or sand." after the words "compacted soil".

**Section 20.7.3.502 DESIGN; CONVENTIONAL TREATMENT UNITS;
CONSTRUCTION STANDARDS:**

E. Amend to add the phrase "which shall meet the ASTM standard C 1644 - 06 or comparable" after the words " watertight seal" and before the words " approved by the department".

H. Amend to insert the word "tee" after the word "outlet" and before the words " of the tank"; insert the words "or external to the tank" after the words "of the tank" and before the words " before final discharge"; insert the phrase "Effluent filters shall have a handle or other mechanism to remove the filter that extends to within six inches (6'') of the top of the access riser. Concrete tanks manufactured with effluent baffles shall not be modified to remove those baffles; external effluent filters shall be used for concrete tanks with effluent baffles." after the words " installed to grade".

**Section 20.7.3.601 DESIGN; ADVANCED TREATMENT SYSTEMS;
GENERAL:**

B. Amend to add the phrase "Limitations on the performance of these units due to the effects of cold weather or altitude shall be disclosed to the WTAC by the proprietary treatment system applicant." After the words " level of treatment".

C. Amend to delete the words " recognized by the department"; insert the words "including those listed in 20.7.3.8.B" after the words " alternative resources" and before the words " shall be designed";

**Section 20.7.3.605 DESIGN; MINIMUM REQUIRED TREATMENT LEVELS
FOR SITE CONDITIONS:**

B.

(1) Amend to add the phrase "except as noted in Subsection F or 20.7.3.703 NMAC;" after the word "disinfection".

(3) Amend to delete the phrase " primary treatment with an appropriate disposal method as approved by the department."; add the phrase "secondary treatment with a timed low-pressure dosed disposal system is required. In sizing the disposal system for Type IV, the loading rate of 5.0 sf/gpd is based on primary treated effluent. Because secondary treatment is required, Section 20.7.3. 703M NMAC allows for up to a 30% reduction in the required absorption area."

D.

(3) Amend to replace the words "clear and convincing" with the words "a preponderance of the" after the words "shall show by" and before the word "evidence".

Amend by inserting a new letter E.

E. The following treatment levels are required for setbacks as described in Table 302.1:

(1) For liquid waste treatment and disposal systems that meet the requirements of Table 302.1 - primary treatment

(2) For systems with disposal less than 100 feet but more than 50 feet from a private or irrigation well, waters of the state, or less than 200 feet but more than 100 feet from a public well - secondary treatment and disinfection

(3)) For systems with disposal less than 50 feet but more than 25 feet from a private or irrigation well, waters of the state, or less than 100 feet but more than 50 feet from a public well - secondary treatment and disinfection with monthly testing. Amend by relettering existing letters E., F., and G., to new letters F., G., and H. respectively.

F. Amend to insert the words "except for holding tanks" after the words " A non-discharging system" and before the words " may be used".

G. Amend to insert the words "or elevated system" after the words " A mound system" and before the words " in accordance with".

H. Amend new letter H to add the phrase ". If the existing level of nitrate in the groundwater exceeds 7 mg/l, a more advanced level of nitrogen reduction as set forth in Subsection B of 20.7.3.603 NMAC shall be required." after the words " may be required".

Section 20.7.3.701 DESIGN; CONVENTIONAL DISPOSAL FIELD; DESIGN AND CONSTRUCTION:

B. Amend to add the phrase "or photographed in compliance with 20.7.3.203.B.(1) NMAC." After the words " approved by the department".

C. Insert the words "and findings" after the word "recommendation" and before the words " by the technical advisory committee"; insert the words "findings and" after the words " shall make its" and before the words " recommendations upon standardized".

F. Amend to insert the phrase "or according to manufacturer's recommendations. Access to the distribution box shall be provided at the ground level." After the words " concrete footing" and before the word "However"; delete the words " after approval by the department" after the words ", the installer" and before the words " may install in lieu".

(3) Amend to add the words "or appropriate bedding material" after the words " compacted fill" and before the words " Such approved pipe".

H. Amend to replace the number "155" with "160" for maximum length of each line; add an asterisk (*) after the dimension "6 ft." for the maximum Depth of Trench; add the phrase "* May be up to 3 feet deeper than the frost line" immediately below the table whose last line is : " other material 2 in." and immediately before the words " I. Minimum spacing between trenches". Amend to add a new letter K.

K. Disposal fields, trenches and leaching beds shall not be paved over or covered by concrete or any material that can reduce or inhibit any possible evaporation of effluent.

Section 20.7.3.702 DESIGN; SEEPAGE PIT; DESIGN AND CONSTRUCTION:
Amend to add a new letter K.

K. Prefabricated reinforced 4000 psi concrete seepage pits may be substituted for the designs listed above.

Section 20.7.3.703 DESIGN; AREA OF DISPOSAL FIELD AND SEEPAGE PITS:

G. Amend to insert the words "treatment and" after the words " with an appropriate " and before the words " disposal method "; delete the phrase "as approved by the department"; replace the word " drianfields." with the word "-drainfields".

J.

(2) Amend to delete the phrase " to provide surge storage. This area of trench sidewall shall not be used in calculating the absorption area."

(3) Amend to delete the words " an additional" after the words "up to" and before the words "three feet of aggregate".

(4) Amend to delete the phrase " excluding the six inches of trench sidewall required in Paragraph (2) of this subsection."

K. Amend to replace the word "twelve" with the word "six".

Amend to add a new letter N.

N. Disposal systems located in areas of severe cold temperatures and high altitudes shall include design provisions to prevent freezing.

Section 20.7.3.801 DESIGN; ALTERNATIVE DISPOSAL:

Amend to insert the words " , elevated systems, alternating drainfields and alternating beds" after the word "mound" and before the word " subsurface"; delete the words " holding tanks".

Section 20.7.3.803 CLUSTER SYSTEMS:

C. Amend to delete the words "user and" after the word "Each" and before the word " successors".

E. Amend to replace the words "that use" with the phrase "whose names appear on title to facilities that are connected to"

Section 20.7.3.804 COMPOSTING AND INCINERATING TOILETS:

B. Amend to add the words "or lot size" after the words " design flow" and before the words "for the property".

Amend to delete C.

Delete " C. Composting/incinerating toilets shall not be used on a lot less than 0.75 acre."

Section 20.7.3.805 IRRIGATION/REUSE SYSTEMS:

D. Amend to insert the word "direct" after the words "shall have no" and before the words " cross connections" ; delete the words "direct or indirect" after the words " cross connections" and before the words "with potable water".

Amend to add a new letter K.

K. A back up redundant conventional disposal system shall be provided for times when irrigation is not able to function due to freezing. The back up system shall have an minimum absorption area of 25% of the standard required absorption area based upon design flow. No reductions in absorption area for treated effluent or proprietary products are allowed for the back up system.

Section 20.7.3.806 EVAPOTRANSPIRATION SYSTEMS:

B. Amend to replace El with Ep; replace the word "lake" with the word "pan"; add the phrase "In addition the formula shall be adjusted to account for a climatically-averaged, monthly water balance during months of minimal evaporation. The water balance calculation is $V = \text{Inflow} - \text{Outflow}$ where inflow is the design flow + precipitation, in gallons; Outflow is the minimum monthly evaporation (in gallons)." after the words "inches per year".

C. Amend to replace the word "lake" with the word "pan"; delete the phrase "the map "Gross Annual Lake Evaporation, New Mexico", USDA, April 1972, or successor version" after the words " shall be determined from"; Add the phrases "Class A land pan evaporation data recorded for each month from the weather station which best represents climatological conditions in the study area. Measurements of monthly and annual evaporation from U.S. Weather Bureau Class A land pans from NOAA or a mutually acceptable evaporation rate." After the words " shall be determined from".

G. Amend to add the phrase "Native soil may not be used." After the words " sand is preferred".

Amend to add a new letter M.

M. All ET Beds shall be fitted with an overflow pipe that empties into a holding tank that meets all the requirements of 20.7.3.809.

Section 20.7.3.808 LOW PRESSURE DOSED DISPOSAL SYSTEMS:

K. Amend to add the phrase "and 20.7.3.805K NMAC." After the word " specifications".

Amend to insert a new letter L.

L. Low Pressure Pipe (LPP) disposal systems are approved. A LPP system is a pressurized distribution system placed in shallow, narrow trenches. LPP system trenches shall be 12 to 18 inches wide and 12 to 18 inches deep. LPP systems may use natural or proprietary aggregate as well as proprietary drainfield products. LPP systems shall be covered with geotextile material to prevent soil intrusion. A minimum of 4 inches and a maximum of 10 inches of soil cover over the LPP system trench is required. Sizing for LPP systems is 5 square feet of absorption area per linear foot of lateral pipe.

Amend to replace existing letters L and M with new letters M and N respectively.

Section 20.7.3.809 HOLDING TANK REQUIREMENTS:

C. Amend to delete the words " except to replace an existing holding tank."; add the phrase "Replacement of existing holding tanks is a modification and shall meet the requirements of 20.7.3." after the words "375 gallons per day," and before the words " Total design flow".

E.

(1) Amend to add the words "Utility bills for electricity, telephone and natural gas or propane for each calendar year shall be provided to the department annually, no later than February 15, as a permit condition for these units."

(2) Amend to insert the words "and kitchen waste" after the words " toilet waste" and before the words" in conjunction with"; add the phrase "Systems utilizing holding tanks that receive only toilet waste must be monitored and tested for total nitrogen in compliance with 20.7.3.603 NMAC."

L

(4) Amend to delete the phrase " or a schedule otherwise determined by the department,"

Amend to add a new (5)

(5) be included in any transfer inspection report or unpermitted system inspection report.

Section 20.7.3.811 GRAYWATER SYSTEMS:

C.

(2) Amend to delete the word "Thirty-three"; insert the word "Fifty"; delete the number "33"; insert the number "50".

Section 20.7.3.812 PUMP STATIONS AND EQUIPMENT:

B. Amend to add the phrase "Access to the piping and electrical wiring to the valves, motors, pumps, and aerators shall be provided within six inches of the ground surface or top of the riser." After the words "locking removable".

C. Amend to insert the words "or enclosure" after the words "other weather proof structure" and before the words "Alarms shall be placed".

Amend to add a new letter D.

D. Pump tanks shall be sized at a minimum of 75% of design flow for demand systems and 100% of design flow for flow equalization systems.

Section 20.7.3.813 BUILDING SEWER:

C. Amend to delete the phrase "Vitrified clay pipe or fittings shall not be used above ground or where pressurized by a pump or ejector. Vitrified clay pipe or fittings shall be a minimum of twelve (12) inches below ground."

Section 20.7.3.901 MONITORING:

C. Amend to add

Field instruments may be used as an alternative to laboratory analyses for TN constituents in accordance with the following protocol.

1. Field instruments shall be operated in accordance with the manufacturer's instruction manual.
2. Factory prepared standards and blanks of de-ionized water shall be used to draw calibration curves with a minimum of two points (see example in Table 1 and Figure 1). At least one calibration curve shall be prepared for each lot number of chemical reagents used.
3. Field tests may include all of the TN constituents, or may be limited to nitrate and ammonia with correction factors for nitrite and organic nitrogen to calculate TN.
4. The first of each six consecutive effluent samples shall undergo both field and laboratory testing. Both sets of test results shall be reported to NMED.
5. If field tests include all TN constituents, each constituent also shall be included in the laboratory tests.
6. If field tests are limited to nitrate and ammonia, laboratory tests shall include nitrate plus nitrite, and TKN, and the following correction factors for nitrite and organic nitrogen shall be applied to calculate TN.
 - a. The nitrite correction factor shall be the laboratory value for nitrate plus nitrite, minus the field value for nitrate.
 - b. The organic nitrogen correction factor shall be the laboratory value for TKN, minus the field value for ammonia.
 - c. If a correction factor of less than zero is calculated, a correction factor of zero shall be used.
 - d. TN shall be calculated as the sum of field nitrate, field ammonia, and the correction factors for nitrate and organic nitrogen.

Table 901.1. Nitrate as Nitrogen (NO₃-N) Calibration Data (mg/L).

	DI WATER	STANDARD SOLUTION
Actual value	0.0	10.0
Test result	0.5	10.1

Figure 1. NO₃-N Calibration Data.

J. Amend to add the phrase "The system shall be resampled no later than 30 days from the evaluation and results submitted to the department as soon as they become available from the lab." After the words "into compliance"

K. Amend to replace the word "may" with the word "shall" after the words "more experienced operator"; insert the following language "If a more experienced operator or training does not bring the effluent quality into compliance, the manufacturer shall provide its own operator to bring the system into compliance. If the manufacturer's operator is unable to bring the system into compliance the permittee shall be issued a notice of violation and the system immediately referred to the WTAC for review. If the WTAC finds that the system itself is incapable of producing the required effluent quality then the system must be replaced with a system that is approved for producing the required effluent quality." after the word "implemented".

L.

(3)(b) Amend to add the phrase "except that the permit schedule may be amended to reflect periodic occupancy or prolonged vacancy;" after the words "20.7.3 NMAC".

Section 20.7.3.902 OPERATION AND MAINTENANCE REQUIREMENTS AND INSPECTION REQUIREMENTS AT TIME OF TRANSFER:

B. Amend to insert the following phrase "or any on-site liquid waste treatment and disposal system that utilizes a pump" after the words " and before the words " installed after the effective date"; insert the phrase "or required by a prior version of 20.7.3" after the words " this regulation " and before the words " shall enter into"; replace the words "department approved" with the words "legally binding, notarized" after the words " enter into a" and before the words " maintenance contract";

C. Amend to delete the words " and high strength waste" after the words " hazardous waste" and before the words " shall not be introduced"; add the phrase "High strength waste may be treated by an appropriately designed advanced treatment system" after the words " introduced into the system.

E. Amend to add the words "permitted, conventional" after the words " with an existing" and before the words " on-site liquid waste"; replace the word "an" with the phrase "a currently certified third party" after the words " inspected and evaluated by" and before the words " inspector utilizing a department approved form"; add the following language "If the system is a permitted advanced treatment unit, the inspection shall be conducted by a currently certified third party inspector who is approved and trained by the manufacturer of the system. If the advanced treatment system is unpermitted, the inspection shall be performed by a currently certified inspector from the department and a certificate of registration or permit application shall be submitted to the department in accordance with Subsection J or K of 20.7.3.401 NMAC." after the words " department approved form."

Insert a new number (3)

(3) if a final inspection for a new system or a property transfer inspection for an existing system has been done within 180 days of the transfer of the property, the property transfer inspection need not be conducted.

G. Amend to insert the words "or illegal" after the word "failed" and before the word "system"; insert the words "or illegal" after the words " remedy the failed" and before the words " system with department approval".

Amend to add a new H.

H. In the event no transfer inspection is performed in a property transfer subject to 20.7.3 NMAC, the department shall forward the names of all real estate licensees involved in the violation to the New Mexico Real Estate Commission.

Section 20.7.3.903 MAINTENANCE SERVICE PROVIDERS (MSP) FOR CONVENTIONAL AND ADVANCED ON-SITE LIQUID WASTE SYSTEMS:

A.

(1) Amend to insert the phrase "), New Mexico Utility Operator's Certification Program for wastewater operators" after the word "(NAWT)," and before the words " or equivalent".

Amend to add a new (4)

(4) Possess a valid, appropriate contractor's license issued by the construction industries division

B. Amend to insert the words "by the manufacturer" after the words " shall be certified" and before the words " for the proprietary unit being maintained."

I.

(5) Amend to insert the phrase "as required by the contractor's licensing law, including workers comp." after the word "insurance"

J. Amend to insert the word "or illegal" after the word "failed" and before the word "system".

Section 20.7.3.906 ADMINISTRATIVE ENFORCEMENT:

B. Amend to insert the words ", in writing," after the words " authorized by the secretary" and before the words " to institute".

D.

(1) Amend to add the phrase "Past violations must be based on the regulations in effect at the time of the infraction; and no enforcement action can taken more than two years after sworn discovery by the department;" after the words " current violation or both;"

G. Amend to add the phrase "and no new permit applications shall be processed or approved for the violator until all penalties are paid in full." After the words " for each noncompliance with the order".

Amend to add a new letter L

L. Upon any violation of these regulations by the department the affected party may commence a civil action against the department in district court for appropriate relief, including a temporary or permanent injunction.

Amend to add a new letter M.

M. The department shall report all incidents involving unlicensed or improperly licensed contractors to the construction industries division of the regulation and licensing bureau of the State of New Mexico for investigation.

Section 20.7.3.1002 TEMPORARY PROVISIONS:

Amend to insert the words "legally issued" after the word "All" and before the words " registration certificates"; insert the phrase ", except for those that violate 20.7.3.401.P," after the words " were issued shall" and before the words " remain in full force".

Section 20.7.3.1006 COLLATERAL REQUIREMENTS:

Amend to insert the word "valid" after the words " more stringent" and before the words " city or county"; add the phrases "unless those city or county regulations or ordinances are in violation of 74-1-14 NMSA 1978. The department shall not knowingly issue a permit that violates a city or county regulation issued in compliance with 74-1-14 NMSA 1978." After the words "liquid waste".

The Professional On-Site Wastewater Re-Use Association of New Mexico and Link Summers have worked diligently with various installers, site evaluators, system designers, installers, pumpers, maintenance service providers, pumpers, state and local officials, regulatory authorities, manufacturers, trade associations, and educators in preparation of these proposed amendments, and will continue to do so.

Thank you for your consideration of this request.

Sincerely,

Ralph Baker Dotson

President

Professional On-Site Wastewater Re-Use
Association of New Mexico, Inc.

Link Summers, Pro Se

TITLE 20 ENVIRONMENTAL PROTECTION
CHAPTER 7 WASTE WATER AND WATER SUPPLY FACILITIES
PART 3 LIQUID WASTE DISPOSAL AND TREATMENT

20.7.3.1 ISSUING AGENCY: New Mexico Environmental Improvement Board.
[20.7.3.1 NMAC - Rp, 20.7.3.1 NMAC, 9/1/05]

20.7.3.2 SCOPE:

A. This part, 20.7.3 NMAC, applies to on-site liquid waste systems, and effluent from such systems, that are designed to receive and do receive two thousand (2,000) gallons or less of liquid waste per day, and that do not generate discharges that require a discharge plan pursuant to 20.6.2 NMAC or a national pollutant discharge elimination system (NPDES) permit. This part, 20.7.3 NMAC, constitutes the New Mexico Liquid Waste Disposal and Treatment code for on-site liquid waste systems that are designed to receive and do receive two thousand gallons or less of liquid waste per day as authorized by 74-1-8.A(3) NMSA 1978.

B. 20.7.3.306 and 809 NMAC apply to the disposal of on-site septage and holding tank wastes.
[20.7.3.2 NMAC - Rp, 20.7.3.2 NMAC, 9/1/05]

20.7.3.3 STATUTORY AUTHORITY: NMSA 1978, Sections 74-1-6, 74-1-7(A)(3), 74-1-8(A)(3), and 74-1-9(Repl. Pamph 1993 and Cum. Supp. 1997).
[20.7.3.3 NMAC - Rp, 20.7.3.3 NMAC, 9/1/05]

20.7.3.4 DURATION: Permanent.
[20.7.3.4 NMAC - Rp, 20.7.3.4 NMAC, 9/1/05]

20.7.3.5 EFFECTIVE DATE: September 1, 2005, except where a later effective date is indicated in the history note at the end of a section.
[20.7.3.5 NMAC - Rp, 20.7.3.5 NMAC, 9/1/05]

20.7.3.6 OBJECTIVE: To protect the health and welfare of present and future citizens of New Mexico by providing for the prevention and abatement of public health hazards and surface and ground water contamination from on-site liquid waste disposal practices and to accurately document official actions taken by the department pursuant to the Public Records Act 14-3-1 - 23 NMSA 1978 and the Executive Records Retention and Disposition Schedule New Mexico Environment Department 1.18.667 NMAC;
[20.7.3.6 NMAC - Rp, 20.7.3.6 NMAC, 9/1/05]

20.7.3.7 DEFINITIONS: As used in 20.7.3 NMAC.

A. Terms starting with the letter 'A' are defined as follows:

(1) "absorption area" means the area in square feet of infiltrative surface below the invert of the pipe in a soil disposal system designated to receive effluent from a treatment unit;

(2) "advanced treatment" means any process of wastewater treatment that removes a greater amount of contaminants than is accomplished through primary treatment; advanced treatment may include physical or chemical processes; Advanced treatment systems include systems that provide secondary treatment, tertiary treatment, and disinfection. Approved advanced treatment units appear on the approved product list on the new mexico environment department website www.nmenv.state.nm.us.

(3) "aggregate" means clean washed gravel (no greater than 4% fines by weight), clean crushed rock, proprietary or other media reviewed by the technical advisory committee and approved by the department; "aggregate" shall have a minimum size of 3/4 inch and a maximum size of 2 1/2 inches and provide no less than 35% void space under field conditions; except for approved proprietary aggregate and tire chips the aggregate shall be durable, inert, and shall have a hardness value of 3 or more on the Mohs scale of hardness so it will maintain its integrity, not collapse or disintegrate with time, and not be detrimental to the performance of the system;

(4) "alternative disposal" means any approved on-site liquid waste disposal method used in lieu of, including modifications to, a conventional disposal method; these include but are not limited to, mounds, evapotranspiration beds, alternating drainfields and alternating beds, split flow systems, subsurface drip disposal, low pressure pipe, and timed and untimed pressure dosed systems;

(5) "amendment of permit" means a change that does not affect the permissibility of a liquid waste system, including a change of ownership, and is not a "modification" as defined in this section;

(6) "approved" means:

(a) materials, products or procedures that have been reviewed by the technical advisory committee, if required, and accepted for use by the department;

(b) a liquid waste system that was permitted, constructed and installed in compliance with the standards and requirements of this regulation;

(c) a person or entity authorized by the department to offer on site liquid waste consulting services, design, repair, install, modify or maintain liquid waste systems or a person authorized by the department to perform site or liquid waste system evaluations; and

(7) "arroyo" means a dry wash or draw that flows occasionally, a watercourse (as a creek or stream) in an arid region or a water carved gully or channel.

B. Terms starting with the letter 'B' are defined as follows:

(1) "bedrock" means the more or less solid, undisturbed rock in place either at the surface or beneath surficial deposits of gravel, sand or soil, or a consolidated rock formation of impervious material that may exhibit jointed, fractured or deteriorated characteristics, or the R horizon of a soil profile as defined in the USDA soil survey manuals;

(2) "bedroom" means any room or unfinished area within a building that is designated or might reasonably be used as a sleeping room pursuant to the responsible building permitting authority or manufactured housing authority;

(3) "biochemical oxygen demand" or "BOD" means the rate at which organisms use the oxygen in water or wastewater while stabilizing decomposable organic matter under aerobic conditions;

(4) "blackwater" means waste from a liquid flushing toilet, urinal, kitchen sinks, dishwashers or laundry water from the washing of material soiled with human excreta, such as diapers;

(5) "body of water" means all constrained water including water situated wholly or partly within or bordering upon New Mexico, whether surface or subsurface, public or private;

(6) "building drain" means that part of the lowest piping of a drainage system that receives the collective liquid waste discharge from soil, waste and other drainage piping inside a building and conveys it to the building sewer that begins two (2.0) feet outside the vertical plane of the building wall, residential or commercial unit; and

(7) "building sewer" means that part of the horizontal piping of a drainage system that extends from the end of the building drain located two (2.0) feet outside the building wall and that receives the liquid waste discharge from the building drain and conveys it to a liquid waste treatment unit or approved point of disposal.

C. Terms starting with the letter 'C' are defined as follows:

(1) "canal" means a man-made ditch or channel that carries water for purposes other than domestic consumption;

(2) "certificate of registration" means a permit for the continued operation of a previously unpermitted on-site liquid waste system; A "certificate of registration" is an official record and property of the State of New Mexico which is subject to the Public Records Act 14-3-1 - 23 NMSA 1978 and the Executive Records Retention and Disposition Schedule New Mexico Environment Department 1.18.667 NMAC;

(3) "cesspool" means an excavation or non-water tight unit that receives untreated water-carried liquid waste allowing direct discharge to the soil;

(4) "clay" means:

(a) a soil separate consisting of particles less than 0.002 millimeters in diameter; or

(b) the textural class name of any soil that contains 40% or more clay, less than 45% sand and less than 30% silt;

(5) "clearance" means the vertical thickness of suitable soil between the lowest point of a liquid waste disposal system and the seasonal high ground water table, bedrock or other limiting layer;

(6) "cluster system" means a wastewater system that serves more than one unit and treats 2000 gallons per day or less of wastewater;

(7) "coarse sand" means soil comprised of 25% or more of soil particles 0.5 to 2.0 mm in diameter and less than 50% of any other grade of sand;

(8) "commercial liquid waste" means wastewater, whether treated or untreated, that exceeds 300 mg/l BOD, 300 mg/l TSS, 80 mg/l total nitrogen or 105 mg/l fats, oils and grease;

(9) "commercial unit" means a structure that is not a residential unit but which has sewage producing fixtures such as sinks, baths, showers, toilets, urinals, dish- and clothes-washers or floor drains for receiving liquid waste including but not limited to uses included in Table 201.1;

(10) "conventional disposal" means a subsurface soil absorption system with gravity distribution of the effluent, with or without a lift station, constructed in accordance with the standards set forth in this regulation, including trench or bed absorption areas and seepage pits;

(11) "contractor" for the purposes of 20.7.3 NMAC is anyone holding a current, valid MM98, MM1, MS1, or MS3 license issued by the construction industries division of the Regulation and licensing department of the State of New Mexico.

(12) "conventional treatment" means a septic tank where primary treatment occurs; and

(13) "conventional treatment system" means an on-site liquid waste system utilizing both conventional treatment and conventional disposal; for fee purposes only, "conventional treatment system" includes privies, holding tanks and vaults.

D. Terms starting with the letter 'D' are defined as follows:

(1) "degrade a body of water" means to reduce the physical, chemical or biological qualities of a body of water and includes, but is not limited to, the release of material that could result in the exceeding of standards established by 20.6.4 NMAC, Standards for Interstate and Intrastate Surface Waters, by 20.6.2 NMAC, Ground and Surface Water Protection and by 20.7.10 NMAC, Drinking Water;

(2) "department" means the Secretary of the New Mexico environment department or his lawful designee pursuant to 9-7A-6 B.1.2.9, 10, and 11 NMSA 1978;

(3) "design flow" means the flow rate for which an on-site liquid waste system must be designed in order to assure acceptable system performance, assuming the use of conventional plumbing fixtures;

(4) "discretion" means the limited power of designated department personnel to make various decisions based on his/her opinion within general legal guidelines. Discretion regarding any part of 20.7.3 must be signed and in writing and may only be exercised by District Managers with signed, written concurrence of the Bureau Chief. Discretionary decisions that are clearly unreasonable, erroneous, or arbitrary and not justified by the facts or the law are prohibited.

(5) "disinfected" or "disinfection" means the use of any process designed to effectively kill most micro-organisms contained in liquid waste effluent including essentially all pathogenic (disease causing) organisms, as indicated by the reduction of the fecal coliform concentration to a specific level; these processes include, but are not limited to, suitable oxidizing agents such as chlorine, ozone and ultraviolet light;

(6) "disposal system" means a generally recognized system for disposing of the discharge from a liquid waste treatment unit and includes, but is not limited to, seepage pits, drainfields, evapotranspiration systems, sand mounds and irrigation systems;

(7) "domestic liquid waste" means wastewater that does not exceed 300 mg/l BOD, 300 mg/l TSS, 80 mg/l total nitrogen or 105 mg/l fats, oils and grease; and

(8) "drainage ditch" means an unlined trench dug for the purpose of draining water from the land or for transporting water for use on the land.

E. Terms starting with the letter 'E' are defined as follows:

(1) "edge of a watercourse, canal or arroyo" means that point of maximum curvature at the upper edge of a definite bank or, if no definite bank exists, the highest point where signs of seasonal high water flow exist;

(2) "effluent" means the discharge from the final treatment unit;

(3) "effluent disposal well" means a prohibited method of disposal consisting of a drilled, driven or bored shaft or dug hole with depth greater than any surface dimension, used for subsurface emplacement of liquid waste, including, but not limited to, abandoned water supply wells, irrigation wells and test holes, but excluding seepage pits used as disposal systems, which conform to the standards in 20.7.3.702 NMAC;

(4) "elevated system" means a system installed either partially or completely above grade in a constructed fill area for the purpose of meeting clearance to a limiting layer.

(5) "enclosed system" means a watertight on-site liquid waste system that does not discharge to the soil, including, but not limited to, holding tanks and lined evapotranspiration systems;

(6) "established on-site liquid waste system" means an on-site liquid waste system that has been in active use at any time during the ten (10) years prior to submission of a permit application and in compliance with any liquid waste disposal regulation in effect at the time of installation, excluding the permitting or registration process, but does not include cesspools installed after September 14, 1973;

(7) "evapotranspiration system" means a disposal system designed to dispose of effluent through evaporation and plant uptake and transpiration; and

(8) “experimental system” also referred to as “innovative technology” means, without limitation, any on-site liquid waste system utilizing a method of liquid waste treatment technology, processes, equipment or components that are not fully proven in the circumstances of their intended use, but, based upon documented research and demonstration, appear to offer benefits which outweigh the potential risks of failure, or a method of disposal that is not currently approved by the department; experimental systems shall be submitted for review to the wastewater technical advisory committee (WTAC) who shall recommend the system for full approval, recommend approval with conditions or reject the proposed system; final approval of experimental systems shall be at the discretion based on the recommendation of the WTAC and shall be signed off by the secretary. Once signed by the Secretary the designation “experimental” shall be removed and the system shall be placed on the approved list.

F. Terms starting with the letter ‘F’ are defined as follows:

(1) “failed system” means, without limitation, an on-site liquid waste system that does not operate as permitted, that does not provide a level of treatment at least as effective as that provided by on-site liquid waste systems that meet the requirements of 20.7.3 NMAC or that poses a hazard to public health or degrades a body of water; and

(2) “fixture units” means a quantity of flow as defined in the UPC upon which plumbing systems are sized.

G. Terms starting with the letter ‘G’ are defined as follows:

(1) “gravels” means, for purposes of soils classification, a soil separate consisting of particles greater than 2 mm in diameter;

(2) “graywater” means untreated household wastewater that has not come in contact with toilet waste and includes wastewater from bathtubs, showers, washbasins, clothes washing machines and laundry tubs, but does not include wastewater from kitchen sinks, dishwashers or laundry water from the washing of material soiled with human excreta, such as diapers; and

(3) “ground water” means interstitial water that occurs in saturated earth material and is capable of entering a well in sufficient amounts to be utilized as a water supply.

H. Terms starting with the letter ‘H’ are defined as follows:

(1) “hazard to public health” means the indicated presence in water or soil of biological, chemical or other contaminants under such conditions that could adversely impact human health, including surfacing liquid waste, degradation to a body of water used as, or has the potential to be used as, a domestic water supply source, presence of an open cesspool or tank or exposure of liquid waste or septage in a manner that allows transmission of disease;

(2) “holding tank” means a non-discharging watertight tank designed to receive and retain liquid waste for periodic pumping and disposal off-site;

(3) “homeowner” means a person or persons who owns and occupies, or plans to occupy, a single family home; and

(4) “household hazardous waste” means a wide range of household products that have the characteristics of hazardous waste when discarded, including but not limited to, pesticides and herbicides, oil-based paints and stains, automobile fluids (antifreeze, motor oil, transmission, steering and brake fluids, gasoline), pool chemicals, hobby chemicals and darkroom chemicals.

I. Terms starting with the letter ‘I’ are defined as follows:

(1) “imminent hazard to public health or safety” means any situation with the potential to immediately and adversely impact or threaten public health or safety;

(2) “impervious formation” means any soil or rock formation with a hydraulic conductivity of 10^{-7} cm/sec or less;

(3) “industrial process wastewater” means non-household wastewater, excepting the following: human excreta; used water from showers, washbasins and dishwashers; and food preparation waste; any wastewater generated in a commercial activity that contains the materials prohibited by Subsection A of 20.7.3.304 NMAC is industrial process wastewater;

(4) “inspector” means a person certified by the department to be competent in the physical examination and evaluation of on-site liquid waste systems after completing an nationally recognized, approved course of instruction and passing an approved qualifying exam;

(5) “interstitial water” means water in spaces between solid earth particles; and

(6) “invert” means the lowest portion of the internal cross section of a pipe or fitting.

J. Terms starting with the letter ‘J’ are defined as follows: [RESERVED]

K. Terms starting with the letter ‘K’ are defined as follows: [RESERVED]

(1) “kennel” means a facility where more than four (4) dogs and cats or other non-livestock domesticated animals are bred, trained, or boarded.

L. Terms starting with the letter ‘L’ are defined as follows:

(1) “lateral” means a secondary water or wastewater pipeline branching directly from a central supply pipeline or manifold leading to an irrigation site;

(2) “limiting layer” means an impervious formation, bedrock or the seasonal high ground water table;

(3) “liner” means a manufactured or naturally occurring substance that restricts seepage to no more than 10^{-7} cm/sec. over the design service life of the lined unit; manufactured liners must have a minimum single-ply thickness of 20 mils and have no leaks;

(4) “liquid capacity” means the volume of liquid that is contained in a septic tank or treatment unit measured from the invert of the outlet; “liquid capacity” shall be calculated by multiplying the inside length by the inside width by the depth measured from the invert of the outlet to the unit’s floor and converting the resulting sum to gallons;

(5) “liquid waste” means the discharge of wastewater from any residential or commercial unit where the total wastewater discharge on a lot is 2000 gallons per day or less; liquid waste includes without limitation human excreta and water carried waste from plumbing fixtures, including, but not limited to, wastes from toilets, sinks, showers, baths, clothes- and dish-washing machines and floor drains; liquid waste includes nonhuman animal excreta and other animal waste but shall be treated in a separate, properly - designed liquid waste treatment unit dedicated to the treatment of that waste only; liquid waste also includes non-water carried wastes discharged into holding tanks, privies and vaults; specifically excluded from the definition of liquid waste are industrial process wastewaters, roof drainage, funeral home process discharges, mine or mill tailings or wastes;

(6) “liquid waste system” means all liquid waste treatment units and associated disposal systems, or parts thereof, serving a residential or commercial unit on a lot; liquid waste systems include enclosed systems, holding tanks, vaults and privies but do not include systems or facilities designed to receive or treat mine or mill tailings or wastes;

(7) “liquid waste treatment unit” means a component of the on-site liquid waste system where removal, reduction or alteration of the objectionable contaminants of wastewater is designed to occur; it may include a holding component but does not include soil;

(8) “load” or “loading” means:

(a) in the context of the biological or chemical load received by an on-site liquid waste system, the amount of material applied to an on-site system liquid waste component per unit area or unit volume;

(b) in the context of the structural load applied to an on-site liquid waste structural component, the structural force applied to a liquid waste system component per surface area; and

(9) “lot” means a unified parcel excluding roadways and roadway easements, legally recorded or validated by other means; “lot” includes any contiguous parcel subject to a legally recorded perpetual easement that dedicates the servient parcel for the disposal of liquid waste generated on the dominant parcel.

M. Terms starting with the letter ‘M’ are defined as follows:

(1) “maintenance contract” means a notarized contract between the system owner and a maintenance service provider in which the maintenance service provider agrees to provide periodic inspections in regards to the operation, maintenance and repair of the system;

(2) “maintenance service provider” means a public entity, company or individual in the business of maintaining liquid waste systems according to manufacturers’ specification;

(3) “manifold” means a part of a water distribution system normally located between the laterals and central supply line; the manifold splits the flow into a number of flows, either for distribution or for application to the land;

(4) “may” means discretionary, permissive or allowed with conditions as listed in 20.7.3.7.D4; and

(5) “modify” or “modification” of a liquid waste system means:

(a) to change the method of on-site liquid waste treatment or disposal;

(b) to change the design of the on-site liquid waste system;

(c) to increase the design flow or load received by the on-site liquid waste system above the original design flow or load; or

(d) replace or expand the treatment unit or disposal system.

(e) to change the name of the person or contractor who performs the site evaluation, system design, or installation of an on-site liquid waste system.

N. Terms starting with the letter ‘N’ are defined as follows: [RESERVED]

(1) "nondischarging system" means a watertight system that allows no discharge of wastewater except through evaporation or pumping. Nondischarging systems include lined evaporation, lined evapotranspiration, and holding tanks. None of the total flow nondischarging systems receive discharges into the soil to percolate into groundwater. Systems may also be nondischarging with regard to specific contaminants of concern such as nitrogen. Split flow systems that separate all blackwater from graywater may be regarded as nondischarging with regard to nitrogen and do not require laboratory testing. Split flow systems that do not separate all blackwater from graywater are discharging systems with regard to nitrogen and do require laboratory testing.

O. Terms starting with the letter 'O' are defined as follows:

(1) "off-site water" means the domestic water supply for the lot is from:

(a) a private water supply source that is neither within the lot nor outside the lot within one hundred (100) feet of the property line of the lot; or

(b) a public water supply source that is not within the lot;

(2) "on-site" means located on or within a lot;

(3) "on-site liquid waste system" means a liquid waste system located on the lot where the liquid waste is generated;

(4) "on-site water" means the domestic water supply for the lot is from:

(a) a private water supply source that is within the lot or within one hundred (100) feet of the property line of the lot; or

(b) a public water supply source that is within the boundaries of the lot; and

(5) "owner" means any person who owns an on-site liquid waste system or any component thereof, or any lot upon which any on-site liquid waste system or any component thereof is located.

P. Terms starting with the letter 'P' are defined as follows:

(1) "percolation rate" means the rate of entry of water into soil as determined by a standard soil percolation test at the depth and location of the proposed soil disposal system;

(2) "permanently displayed" means, in context of septic tank legends, embossed into the tank surface or a mechanically attached, non-corrosive plate;

(3) "permit" means a written approval from the department to install, modify, or operate an on-site liquid waste system; A "permit" is an official record and property of the State of New Mexico which is subject to the Public Records Act 14-3-1 - 23 NMSA 1978 and the Executive Records Retention and Disposition Schedule New Mexico Environment Department 1.18.667 NMAC.

(4) "permittee" means any owner of a permitted on-site liquid waste system;

(5) "person" means any individual, partnership, firm, public or private corporation, association, trust, estate, the state or any political subdivision or agency or any other legal entity or their legal representative, agents or assigns;

(6) "policy statement" means any reasonable and procedural rules and regulations not authorized by 20.7.3 NMAC which the department deems necessary to carry out the duties of the liquid waste program of the Environmental Health Division. Policy statements must be included in the next proposed rule change to 20.7.3 subsequent to the issuance of the policy statement or they become null and void as of the date of adoption of the subsequent rule change. Policy statements may be appealed as provided in 20.7.3.406 NMAC.

(6) (7) "primary treatment" means a liquid waste treatment process that takes place in a treatment unit and allows those substances in wastewater that readily settle or float to be separated from the water being treated; Primary treated wastewater does not exceed 150 mg/l BOD, 75 mg/l TSS, 60 mg/l total nitrogen or 60 mg/l fats, oils and grease.

(7) (8) "private water supply source" means a water supply source such as a well, spring, infiltration gallery or surface water withdrawal point used to provide water to a water supply system, if such system does not have a least fifteen (15) service connections and does not serve an average of twenty-five (25) individuals at least sixty (60) days out of the year;

(8) (9) "privy" or "outhouse" means a receptacle for non-liquid-carried human excreta allowing direct discharge to the soil;

(9) (10) "professional engineer" or "P.E." means a professional engineer licensed under the New Mexico Engineering and Survey Practice Act and in compliance with Section 16.39.3.8. F 1-5 : On-site wastewater engineering; "professional engineer" includes engineers licensed in any state of the United States for engineering related to a product design and manufacture of proprietary products;

(10) (11) "proprietary system" means a system patented, trademarked or otherwise the intellectual property of manufacturers not in the public domain; and

(12) "public water supply source" means a water supply source such as a well, spring, infiltration gallery or surface water intake structure used to provide water to a public water supply system for human consumption if the system served has at least fifteen (15) service connections or regularly services an average of twenty-five (25) individuals at least sixty (60) days out of the year.

Q. Terms starting with the letter 'Q' are defined as follows: [RESERVED]

R. Terms starting with the letter 'R' are defined as follows:

(1) "repair" means servicing or replacing, with like kind, mechanical or electrical parts of an approved liquid waste system, pumping of septage or making minor structural corrections to a tank or distribution box; "repair" does not include installing risers or external effluent filters.

(2) "residential unit" means a structure that is primarily used for living quarters but does not include facilities listed in Table 201.1;

(3) "replacement area" means an unobstructed area within a lot designated to allow future construction of a replacement disposal area as required by Subsection H of 20.7.3.201 NMAC;

(4) "retention/detention area" means an area on a parcel of property specifically designated and designed to capture and hold water resulting from the runoff of precipitation; and

(5) "roadway" means the surface area of land dedicated by easement or use to provide vehicular passage serving more than one lot or more than five residential or commercial units on a single property.

S. Terms starting with the letter 'S' are defined as follows:

(1) "sand" means:

(a) a soil separate consisting of individual rock or mineral fragments that range in diameter from 0.05 to 2.0 millimeters; or

(b) the textural class name of any soil that contains 85% or more sand and not more than 10% clay;

(2) "seasonal high ground water table" means the highest level to which the upper surface of ground water may be expected to rise within twenty-four (24) consecutive months;

(3) "seasonal high water flow" means the highest level that perennial or intermittent surface waters may be expected to rise as a result of a 25 year, 6 hour storm event;

(4) "secondary treatment" means a wastewater treatment process used to convert dissolved or suspended materials into a form more readily separated from the water being treated; the process is commonly a biological treatment process followed by settling and clarification resulting in a reduction of the 5-day biochemical oxygen demand (BOD5) and total suspended solids (TSS) concentrations to a level specified in 20.7.3.602 NMAC;

(5) "secretary" means the secretary of environment or a legally designated representative;

(6) "seepage pit" means a type of absorption system that uses a vertical, cylindrical, underground receptacle so constructed as to allow the disposal of effluent by soil absorption through its walls;

(7) "septage" means the residual wastes and water periodically pumped from a liquid waste treatment unit or from a holding tank;

(8) "septic tank" means a liquid waste treatment unit designed to provide primary treatment and anaerobic treatment prior to disposal;

(9) "setback distance" means the distance measured by a straight horizontal line between the on-site liquid waste system, its designated replacement area, or portion thereof, and the object being considered;

(10) "shall" means mandatory;

(11) "silt" means:

(a) a soil separate consisting of particles between 0.05 and 0.002 millimeters in diameter; or

(b) the textural class name of any soil that contains 80% or more silt and less than 12% clay;

(12) "soil" means sediment or other unconsolidated accumulations of mineral particles that may or may not contain organic material and that have filtering properties;

(13) "split flow system" means a system that is a combination discharging/non-discharging system that separates the toilet and kitchen waste (black water) from the rest of the waste stream (gray water). The toilet waste and kitchen waste, containing approximately 100% of the total nitrogen load, is directed to a holding vault that must be removed by a septage pumping service. The remaining waste is discharged to a conventional septic system, evaporation system, or gray water system as described in 20.7.3.810 NMAC or 20.7.3.811 NMAC. These systems are non - discharging systems with regard to nitrogen and do not require laboratory testing when used for lot size reduction. Split flow systems that separate toilet water, but not kitchen water, from the rest of the waste stream are discharging systems with regard to nitrogen and do require laboratory testing when used for lot size reduction.

(14) "structure" means any constructed object for which a footing is required by the appropriate building code. Buildings and enclosures erected for the purpose of housing on - site wastewater and treatment and disposal facility components are exempt from the setback requirements of 20.7.3.302 NMAC.

(13) (15) "suitable soil" means a soil, whether naturally occurring, or introduced, that will treat the primary effluent effectively and act as an effective filter and remove organisms and suspended solids prior to the effluent reaching ground water, bedrock or a limiting layer, and that will provide adequate transmission to prevent a failed system; suitable soils are classified Table 703.1; and

(14) (16) "surface application" means the application of disinfected effluent to the ground surface where access is restricted by artificial or natural conditions.

T. Terms starting with the letter 'T' are defined as follows:

(1) "technical advisory committee" or "TAC" means the wastewater technical advisory committee created by NMSA 1978 Section 9-7A-15;

(2) "tertiary treatment" means additional treatment beyond secondary treatment standards, specifically, the reduction in the total nitrogen concentration;

(3) "test hole" means a hole dug in the proposed disposal field area a minimum of seven (7) feet deep or four (4) feet below the bottom of disposal field, whichever is greater, and a minimum of two (2) feet wide; the test hole shall be sufficient to examine the soil visually for type, structure, mottling, impervious layers and other soil characteristics, and to determine the seasonal high water table level; a soil boring may be used to determine the soil characteristics and soil depth;

(4) "total design flow" means the sum of design flows for all on-site liquid waste systems and other wastewater discharges on a lot;

(5) "total nitrogen" or "TN" means the combined organic nitrogen, ammonia, nitrite and nitrate contained in the wastewater or effluent; and

(6) "total suspended solids" or "TSS" means the measurable component of solid matter suspended in water or wastewater.

U. Terms starting with the letter 'U' are defined as follows:

(1) "uniform plumbing code" or "UPC" means the 1997 2006 or currently adopted uniform plumbing code, 14.11.3 NMAC and the 1997 2006 or currently adopted state of New Mexico plumbing code and mechanical code, 14.9.2 NMAC, or the successor versions of each as adopted by the construction industries division of the New Mexico regulation and licensing department and promulgated in the New Mexico administrative code or another applicable code as adopted by the authority having jurisdiction; and

(2) [RESERVED]

V. Terms starting with the letter 'V' are defined as follows:

(1) "vault" means a non-discharging, watertight tank designed to receive and retain non-liquid carried human excreta for periodic pumping and disposal off-site; and

(2) "variance" means an administrative procedure authorizing the issuance of a permit or use of a system that does not meet the specific requirements of 20.7.3 NMAC but which meet the intent of 20.7.3 NMAC. A "variance" is an official record and property of the State of New Mexico which is subject to the Public Records Act 14-3-1 - 23 NMSA 1978 and the Executive Records Retention and Disposition Schedule New Mexico Environment Department 1.18.667 NMAC;

W. Terms starting with the letter 'W' are defined as follows:

(1) "wastewater" means blackwater and graywater;

(2) "watercourse" means any perennial, intermittent or ephemeral surface water conveyance channel including but not limited to a river, creek, arroyo, draw, canal or wash, or any other channel having definite banks and beds with visible evidence of the flow of water;

(3) "water(s) of the state" means all interstate and intrastate waters including natural ponds and lakes, playa lakes, reservoirs, perennial streams and their tributaries, intermittent streams, sloughs, prairie potholes and wetlands;

(4) "watertight" means not allowing water to pass in or out or as otherwise determined in 20.7.3 NMAC; and

(5) "wetlands" means those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions in New Mexico; constructed wetlands are not included in this definition.

X. Terms starting with the letter 'X' are defined as follows: [RESERVED]

Y. Terms starting with the letter 'Y' are defined as follows: [RESERVED]

Z. Terms starting with the letter 'Z' are defined as follows: [RESERVED]
[20.7.3.7 NMAC - Rp, 20.7.3.7 NMAC, 9/1/05; A, 4/1/07]

20.7.3.8 GENERAL PROVISIONS:

A. Interpretation: The definitions in 20.7.3.7 NMAC shall be construed so as to achieve the objective of 20.7.3 NMAC.

B. Alternative Resources: When guidance is sought in areas not covered by 20.7.3 NMAC, the most recent version of the following resources may provide guidance. In cases where reference to these alternative resources is proposed the department shall make the final determination of applicability.

- (1) The American national standards institute (ANSI) book of codes.
- (2) The American society for testing and materials (ASTM) testing manual.
- (3) The international association of plumbing and mechanical officials (IAPMO) codes.
- (4) The National sanitation foundation (NSF) standard 40, standard 41, and standard 46.
- (5) EPA design manuals for onsite wastewater treatment and disposal systems.
- (6) USDA soil survey manuals.
- (7) New Mexico administrative code.
- (8) Wisconsin mound soil absorption system: siting, design and construction manual, university of Wisconsin-Madison.

(9) The 2006 or most recently adopted version of the uniform plumbing code, 14.11.3 NMAC and the 2006 or most recently adopted state of New Mexico plumbing code and mechanical code, 14.9.2 NMAC, or the successor versions of each as adopted by the construction industries division of the New Mexico regulation and licensing department and promulgated in the New Mexico administrative code or another applicable code as adopted by the authority having jurisdiction:

(10) "Wastewater Engineering Treatment, Disposal, and Reuse" by Metcalf & Eddy, Inc. ISBN 0-07-041690-7

(11) "Operation of Wastewater Treatment Plants Volumes 1 & 2" by EPA and the University of California ISBN 1-884701-00-0 and 1-884701-02-7

C. The department field offices shall make educational materials regarding on-site liquid waste systems, including printed copies of 20.7.3 NMAC and a brochure on the maintenance requirements of effluent filters, available to the public and to permit applicants. Information on proper maintenance of systems shall be given to new permittees. Educational materials shall be in both English and Spanish.
[20.7.3.8 NMAC - Rp, 20.7.3.8 NMAC, 9/1/05]

20.7.3.9 through 20.7.3.200 [RESERVED]

20.7.3.201 PROCEDURES; GENERAL REQUIREMENTS:

A. Every owner shall be responsible for the storing, treating and disposing of liquid waste generated on that property.

B. No person shall discharge untreated liquid waste except into a permitted and approved enclosed system, a permitted and approved liquid waste treatment unit or a public sewer system, except for the discharge of graywater pursuant to 20.7.3.810 NMAC. No person shall discharge liquid waste or effluent into a cesspool or effluent disposal well.

C. No person shall discharge effluent from a liquid waste treatment unit except through a permitted and approved liquid waste disposal system or to a permitted sewer system. No person shall discharge effluent from a liquid waste treatment unit to an effluent disposal well.

D. No person shall install, have installed, modify or have modified, own, operate or use an on-site liquid waste system that, by itself or in combination with other on-site liquid waste systems, may cause a hazard to public health or degrade any body of water.

E. All residential and commercial units utilizing an on-site liquid waste system shall connect to a public sewer if required by the local authority having jurisdiction except advanced treatment units that are operating in compliance with permit requirements.

F. The type of on-site liquid waste system shall be determined on the basis of type of facility, location, lot size, soil and site characteristics. The system, except as otherwise approved, shall consist of a liquid waste treatment unit and associated disposal system.

G. An on-site liquid waste system shall be located wholly on the same lot, which is the site of the source or sources served by the on-site liquid waste system.

H. All disposal systems that utilize subsurface discharge and soil absorption shall be designed with an unobstructed replacement or reserve area so that additional seepage pits, drainfields or other subsurface absorption areas equivalent to at least 50% of the required original disposal system may be installed if the original system cannot dispose of all the liquid waste or the system needs to be expanded. No division of a lot or construction or remodeling of a permanent structure on the lot shall be made if such division, construction or remodeling impairs the usefulness of the 50% replacement area.

I. A privy may be used for the disposal of human excreta and toilet paper, but not for the disposal of other liquid wastes.

J. On-site liquid waste systems, other than holding tanks, receiving waste from recreational vehicles (RVs) shall provide pretreatment of the waste to the level of domestic waste primary treatment levels as defined in Paragraph (6), Subsection D P of 20.7.3.7 NMAC prior to discharging to a conventional disposal system. Monitoring of the effluent is required. Existing permitted on-site liquid waste systems receiving permitted to receive waste from recreational vehicles shall continue to be authorized to operate. Upon modification of these existing systems, the system shall be required to provide pretreatment the level of treatment of the waste identified above.

K. On-site liquid waste systems permitted, but not installed, prior to the effective date of 20.7.3 NMAC shall be installed in accordance with the regulations in effect at the time of the permit issuance, provided that the installation of the system shall be completed within one (1) year of the effective date of 20.7.3 NMAC.

L. On-site liquid waste systems installed prior to the effective date of 20.7.3 NMAC shall meet the requirements of the regulations in effect at the time of their initial installation, or if there has been a prior permitted modification, the regulations in effect at the time of the most recent permitted modification will apply or the current regulations, whichever is less stringent.

M. Nothing contained in 20.7.3 NMAC shall be construed to prevent the department from requiring compliance with more stringent requirements than those contained herein, where the department finds that such more stringent requirements are necessary to prevent a hazard to public health or the degradation of a body of water. The following parameters may be considered when determining if a body of water is potentially vulnerable to degradation from liquid waste effluents, and if more stringent requirements may be necessary to prevent such degradation:

~~(1) a water table aquifer (includes both unconfined and semi-confined conditions) with a vadose zone thickness of 100 feet or less containing no soil or rock formation that would act as a barrier to saturated or unsaturated wastewater flow;~~

~~(2) (1) sites within one quarter (1/4) mile of a known groundwater plume of anthropogenic anoxic or nitrate contamination caused by migration through undisturbed vadose zone, provided that the site overlies the same aquifer;~~

~~(3) an aquifer overlain by fractured bedrock;~~

~~(4) (2) an aquifer in karst terrain; and~~

~~(5) (3) a gaining stream or other body of water impacted by nutrients from liquid waste systems.~~

N. Upon written request, the department shall provide a letter of determination stating whether or not more stringent requirements may be imposed on a lot or parcel of land. This determination shall be valid for one year. The department shall issue the determination letter within 10 working days. This letter of determination in no way waives or precludes an applicant's regulatory requirements under this part nor predetermines the regulatory requirements of this part when obtaining a permit.

O. The secretary, or a designated representative, upon presentation of proper credentials and with ~~consent~~ assent or with an administrative search warrant:

(1) shall have the right of entry to any property on which a permitted or unpermitted on-site liquid waste system regulated by 20.7.3 NMAC exists or is required for the limited purpose of inspecting the liquid waste system or to determine compliance with these regulations or permit conditions; failure to provide reasonable access for the purpose of inspecting a liquid waste system or to determine compliance with these regulations or permit conditions shall be cause for revocation or suspension of a permit or other penalties as provided in Section 20.7.3.906 NMAC for unpermitted systems;

(2) shall have access to and may copy any record required to be established and maintained by these regulations or permit conditions; failure to provide reasonable access to or copies of any record required to be established and maintained by these regulations or permit conditions shall be cause for revocation or suspension of a permit; and

(3) may obtain any samples required to determine compliance with 20.7.3 NMAC or permit conditions; failure to provide reasonable access to facilities for the purpose of obtaining samples shall be cause for revocation or suspension of a permit.

P. Design flows shall be calculated as follows:

(1) for residential sources, the design flow shall be calculated assuming two (2) persons per bedroom for the first two (2) bedrooms and one (1) person per additional bedroom in a single family dwelling unit and seventy-five (75) gallons per person per day; multiple family dwelling unit source design flows shall be calculated as the sum of design flows for each single family unit included; and

(2) design flows for nonresidential sources shall be based on Table 201.1 or generally accepted references (such as the uniform plumbing code or the USEPA design manual: *on-site wastewater treatment and disposal systems*); design flows for nonresidential sources also may be based on professional engineering design calculations; total design flows may be determined by the submittal of metered water use or effluent flow data and shall be multiplied by a safety factor of 1.5 for design flow calculations.

Table 201.1: Established liquid waste design flow rates

TYPE OF OCCUPANCY	GALLONS PER DAY
1. Airport, Bus Terminal, Train Station	20 per employee 5 per passenger
2. Beauty & Barber Shop	75 per service chair
3. Bowling alleys (snack bar only)	75 per lane
4. Bed and Breakfast	150 first bedroom 100 each additional bedroom
5. Camps: campground with central comfort station with flush toilets, no showers day camps (no meals served) summer and seasonal	35 per person 25 per person 15 per person 50 per person
6. Churches (Sanctuary) with kitchen waste	2 per seat 7 per seat
7. Dance hall	5 per person
8. Doctor and Dentist Office	250 per practitioner, 15 per employee
9. Factories <u>excluding industrial wastes</u> : per 8-hour shift no showers with showers cafeteria, add	25 per employee 35 per employee 5 per employee
10. Food Operations: Restaurants operating 16 hours or less per day Restaurants operating more than 16 hours per day Bar, cocktail lounge add per pool table or video game Carry out only, including caterers add per 8-hour shift Food outlets only add for deli add for bakery add for meat department add per public restroom	40 per seat 60 per seat 20 per seat 15 each 50 per 100 sq ft floor space 20 per employee 10 per 100 sq ft floor space 40 per 100 sq ft floor space 40 per 100 sq ft floor space 75 per 100 sq ft floor space 200
11. Hotels, Motels, Lodges laundries, lounges and restaurants calculated separately	60 per bed
12. Institutions (resident) Nursing homes Rest homes	75 per person 125 per person 125 per person

13. Laundries self-service (minimum 10 hours/day) commercial	50 per wash cycle per manufacturer's specifications
14. Offices	20 per employee per 8-hour shift
15. Parks: picnic park - toilets only	20 per parking space
16. Recreation Vehicles (RV) Park without water hookup with water and sewer hookup RV dump stations*	75 per space 100 per space 50 per RV
17. Schools - staff and office Elementary and Day Care Intermediate and High Boarding, total waste gym and showers, add with cafeteria, add	20 per person 15 per student 20 per student 100 per person 5 per student 3 per student
18. Service stations and convenience stores uni-sex restrooms	400 per toilet 800 per Toilet
19. Stores public restrooms	20 per employee 10 per 100 sq ft. floor
20. Swimming and bathing places, including spas and hot tubs, public	10 per person
21. Theaters, auditoriums Drive-ins	5 per seat 10 per space
22. Veterinary Clinic, kennels** add add	250 per practitioner or owner 15 per employee 200 per kennel, or 20 per stall, or cage

Liquid waste generated by the occupancies above, exceeding the definition of domestic liquid waste, shall require pretreatment to primary treatment levels as defined in Paragraph (6), Subsection P of 20.7.3.7 NMAC prior to discharging to or utilizing a conventional treatment disposal system.

* RV dumpstation waste shall be discharged into a separate holding tank or correctly designed advanced treatment unit.

** Non human animal waste shall not be combined with human liquid waste in the same liquid waste treatment units. It shall be treated in a separate liquid waste treatment unit.

Q. The minimum liquid capacity of a septic tank shall be determined as follows:

- (1) for residential units, the liquid capacity shall be based on the number of bedrooms using Table 201.2; and
- (2) for commercial units, the liquid capacity shall be based on the number of plumbing fixture units using Table 201.2; or
- (3) if based on estimated design flows pursuant to Paragraph (2) of Subsection P of 20.7.3.201 NMAC, the minimum liquid capacity shall be 2.5 times the design flow, whichever is greater.

Table 201.2: Capacity of Septic Tanks

Single family dwellings, number of bedrooms	Other uses maximum fixture units*	Minimum septic tank capacity in gallons served
1	10	750
2 - 3	12	1000
4	15	1200
5 - 6	20	1500
7 - 9	27	2000
	29	2250
	32	2500

	35	2750
--	----	------

* 100 fixture units or less are equal to 31.1 gallons per fixture unit.

R. Waste from a water softener unit shall comply with the following.

(1) Softener waste may be discharged to a conventional treatment unit. If the waste is not discharged to the treatment unit, the waste may be disposed in accordance with other applicable regulations.

(2) For new construction utilizing an advanced treatment system, the softener waste shall not be discharged to the advanced treatment unit. The softener waste shall bypass the advanced treatment unit and discharge directly to the drainfield or be disposed of in some manner acceptable to the department and meets all other state and local regulations.

(3) If a water softener unit is installed at an existing residential or commercial unit utilizing an advanced treatment unit:

(a) the current liquid waste permit shall be amended to reflect the installation;

(b) a written notice shall be submitted to the maintenance service provider of the advanced treatment unit; and

(c) either a demand-initiated regeneration control device (DIR device) shall be installed or the softener waste shall bypass the advanced treatment unit.

(4) If an advanced treatment unit is to be installed at an existing residential or commercial unit with an existing water softener, the installation shall be done in accordance with the permit.

S. Any on-site liquid waste system that creates a confined space as defined by OSHA shall require a variance as well as any appropriate OSHA permit.

[20.7.3.201 NMAC - Rp, 20.7.3 NMAC, 201, 301, 302, 401, 402, 9/1/05; A, 4/1/07]

20.7.3.202 PROCEDURES; MODIFICATION OF EXISTING SYSTEMS:

A. Prior to the modification of an existing on-site liquid waste system, either permitted or unpermitted, a permit application must be submitted in accordance with 20.7.3.401-405 NMAC. The portion of the system requiring modification shall be in accordance with 20.7.3 NMAC except as noted in Subsection C of 20.7.3.202 NMAC below.

B. Replacement components for on-site liquid waste systems shall be of materials approved by the department utilizing ASTM, ANSI or other recognized standards.

C. On-site liquid waste systems modified after the effective date of this regulation:

(1) shall meet the lot size requirements of the regulations in effect at the time of the initial installation or most recent permitted modification; systems installed prior to November 1, 1973, shall meet the lot size requirements adopted in 1973 except as provided in Table 20.7.3.301.2 NMAC; and

(2) the total lot flow shall be increased only if all current standards and requirements are met pursuant to 20.7.3 NMAC. More stringent requirements may be required pursuant to Subsection M of 20.7.3.201 NMAC.

D. The septic tank need not be replaced as part of the modification if the tank is structurally sound, constructed of approved materials, meet the requirements of 20.7.3.501-502 NMAC, and if the existing tank has a liquid capacity within one tank size of the capacity required by Subsection Q of 20.7.3.201 NMAC. In addition, the tank shall be pumped and the inlet and outlet baffles or sanitary tees checked and repaired or replaced, if needed. An approved effluent filter shall be installed in accordance with Subsection C of 20.7.3.502 NMAC. Concrete septic tanks with effluent baffles shall not be altered in any way and shall use an external effluent filter.

E. Upon modification of any part of the system, an approved effluent filter shall be installed in accordance with Subsection H of 20.7.3.502 NMAC.

E F. Upon the issuance of the permit to modify and the subsequent inspection and approval of the modification, a previously unpermitted system shall be considered permitted and authorized to operate.

G. changing the name on a permit of the person or contractor who performs the site evaluation, system design, or installation of an on-site liquid waste system is a modification and requires a new permit and payment of the appropriate fee.

[20.7.3.202 NMAC - N, 9/1/05; A, 4/1/07;]

20.7.3.203 PROCEDURES; CONSTRUCTION INSPECTIONS AND TESTING:

A. The department may perform site inspections prior to making a decision on a permit application or variance petition, during construction or modification of the system and after completion of the system. The department may require test holes to be excavated and documentation to be provided for purposes of determining soil types, depth of soil and water table depths. In areas where soil conditions are well characterized and groundwater depth is documented, test holes may the department may, in compliance with conditions as listed in

20.7.3.7.D4, NMAC, waive the requirement for test holes, be waived. The department may collect samples of soil, liquid waste and water, including water from wells, to determine compliance with 20.7.3 NMAC.

B. Upon granting the permit or variance application, if the department determines an inspection is necessary, the department shall indicate the point in the construction process where the first construction inspection is to be scheduled or in accordance with Subparagraph A of this section.

(1) The installer or other person doing the work authorized by the permit shall notify the department orally or in writing to schedule an inspection, orally or in writing, a minimum of 2 working days prior to the inspection. The department may assess a re-inspection fee if the work is not ready for inspection at the time of the scheduled inspection. In the event the inspection is not conducted within one hour after the appointed time of inspection, the contractor shall take photographs that accurately identify the site and features of the installation and proceed with the installation. Copies of such photographs shall be submitted to the department. All physical or photo inspections shall meet the minimum standards adopted by the Department appropriate for the type of inspection conducted. The Department shall publish the minimum standards on its web site. Photographic inspections without an on-site physical inspection shall not be classified by the department as 'inspections' for official reports within the department or to any agency or branch of government outside the department.

(2) All homeowner installed systems shall be physically inspected onsite by the department and a department - approved homeowner installation inspection form, including pictures , shall be completed.

(3) If an inspection results in the issuance of a notice of non-approval, a re-inspection shall be required. The person shall notify the department as indicated above.

C. System components shall be properly identified as to manufacturer and shall meet all specifications specified in 20.7.3 NMAC.

D. The department may require testing to verify watertight construction and initial functioning of any liquid waste system. The department shall keep a record of every test for water tightness and post the results of each test on its internet page of approved products under the manufacturer's name and type of product.

(1) Liquid waste treatment units, pump stations or pump chambers shall be considered watertight by successfully completing one of the following testing procedures.

(a) Water pressure testing: Seal the unit, fill with water and let stand for 24 hours. Refill the unit. The unit is approved if the water level is held for 60 minutes.

(b) Vacuum testing: Seal the unit and apply a vacuum to 2 inches (50mm) of mercury. The unit is approved if the vacuum is held for 60 minutes.

(2) The department may require a flow test be performed through the system to the point of effluent disposal. All lines and components shall be watertight. Capacities, required air space, and fittings shall meet the requirements of 20.7.3 NMAC.

(3) The department may require operational testing of advanced treatment components to verify initial functioning.

[20.7.3.203 NMAC - Rp, 20.7.3 NMAC, 204, 408, 9/1/05; A, 4/1/07]

20.7.3.204 PROCEDURES; PROHIBITIONS

A. No owner shall allow dogs or other potentially dangerous animals to be kept caged or penned in the same area where any on-site wastewater system that requires a maintenance contract is located.

20.7.3.205 through 20.7.3.300 [RESERVED]

20.7.3.301 STANDARDS; LOT SIZE REQUIREMENTS:

A. The requirements of this section apply to all conventional treatment systems that discharge to the soil. Compliance with the requirements of this section shall be based on the total design flow for the lot. Water conservation devices or demonstrated actual flows shall not be used to reduce the requirements of this section. For the purposes of 20.7.3 NMAC, lot sizes shall be calculated to the nearest hundredth (0.01) acre.

B. The date of record for a lot shall be considered to be either:

(1) the date of legal recording in the county clerk's office or validation by other means associated with the most recent change in lot size or boundaries; or

(2) for those lots in subdivisions having received final approval from governments having jurisdiction therein prior to February 1, 1990, such date of record shall be two and one-half (2 1/2) years from the date of final government approval or July 1, 1992, whichever occurs first.

C. A conventional treatment system shall not be installed on a lot sized smaller than 0.75 acre, where there is not an established on-site liquid waste system, except as otherwise provided in Subsection F of 20.7.3.301 NMAC. The size of a lot shall be the total area of the lot less any area that is subject to a roadway, roadway

easement and liquid waste disposal easements granted to or by another lot. The design flow for a conventional treatment system shall not exceed 500 gallons per day per acre. For total design flows that exceed the allowable flow or for lots that do not meet the minimum lot size, the total nitrogen discharged to the lot shall be reduced in accordance with Subsection B of 20.7.3.603 NMAC.

D. On-site liquid waste systems installed prior to the effective date of 20.7.3 NMAC shall meet the lot size requirements of the regulations in effect at the time of their initial installation or if there has been a permitted modification, the regulations in effect at the time of the most recent prior permitted modification.

E. Table 301.1 lists the minimum lot sizes required for typical flow rates for conventional treatment systems for lots with a date of record of February 1, 1990 or later.

Table 301.1

TOTAL DESIGN FLOW (gallons per day)	MINIMUM LOT SIZE (acres)
375 or less	0.75
450	0.90
600	1.20
750	1.50
1125	2.25
1500	3.00
1875	3.75
2000	4.00

F. On-site liquid waste systems installed after the effective date of these regulations, on lots with dates of record prior to February 1, 1990, without established on-site liquid waste systems, shall conform to the following:

- (1) for lots less than 0.5 acre, no conventional systems shall be authorized;
- (2) for lots 0.5 acre to 0.75 acre and 100 feet or less to groundwater or within a 200 foot radius of a public water supply well, no conventional systems shall be authorized;
- (3) for lots 0.5 acre to 0.75 acre with a private well, not within a 200 foot radius of a public supply well and 101 feet to 600 feet to groundwater, the total design flow shall not exceed 450 gallons per day or the total design flow allowed in Subsection C of 20.7.3.301 NMAC, whichever is greater, for 3 years after the effective date of these regulations;
- (4) for lots 0.5 acre to 0.75 acre on a public water system, not within a 200 foot radius of a public supply well and 101 feet to 600 feet to groundwater, the total design flow shall not exceed 450 gallons per day or the total design flow allowed in Subsection C of 20.7.3.301 NMAC, whichever is greater, for 5 years after the effective date of these regulations;
- (5) for lots 0.5 acre or larger and greater than 600 feet to groundwater, 450 gallons per day or the total design flow allowed in Subsection C of 20.7.3.301 NMAC, whichever is greater is allowed; and
- (6) once the extended time periods in Paragraphs (3) and (4) of this subsection have expired, then the lot size/flow limitation in Subsection C of 20.7.3.301. NMAC shall apply to new installations.

G. The following Table 301.2 summarizes the minimum lot size requirements, in acres, and permissible design flows in effect prior to February 1, 1990 and is for the purpose of determining the requirements existing at the time of initial installation or most recent permitted modification.

Table 301.2

RECORD DATE								
01/01/60 to 11/01/73		11/01/73 to 09/07/79*		09/07/79 to 03/01/80		03/01/80 to 11/09/85		11/09/85 to 02/01/90
Minimum Lot Size	Soil Group **	Min. Lot Size	Total Design Flow (gpd)	Min. Lot Size	Total Design Flow (gpd)	Min. Lot Size	Total Design Flow (gpd)	Min. Lot Size

OFF-SITE WATER**	0.25***	A	0.50	0-1000	0.50	0-375	0.33	0-375	0.33
		B	0.75	1000-1500	1.00	376-1000	0.50	376-750	0.50
		C	1.00	1500-2000	1.25	1000-1500	1.00	750-1125	1.00
		D	****			1501-2000	1.25	1126-1500	1.25
								1501-2000	1.75
ON-SITE WATER**	0.50***	A	0.75	0-1000	0.75	0-1000	0.75	0-375	0.75
		B	1.00	1000-1500	1.25	1000-1500	1.25	376-750	1.50
		C	1.25	1500-2000	1.70	1501-2000	1.70	750-1125	2.00
		D	****					1126-1500	2.75
								1501-2000	3.50

- (1) * The maximum total design flow was 1,000 gpd for the lot sizes shown.
(2) ** See Subsection H of 20.7.3.301 NMAC.
(3) *** These requirements applied to lots in subdivisions that were required at the time of subdivision to obtain state health department review and approval.
(4) **** No on-site liquid waste disposal to soil allowed.
(5) NOTE: Roadways were first excluded from figuring lot sizes as of 11/09/85.

H. The following Table 301.3 lists the soil types for lot size determinations for the period November 1, 1973 to September 7, 1979: The minimum lot size required for the location of an individual liquid waste disposal system is determined by the most limiting soil group under which any soil characteristic falls.

Table 301.3

SOIL CHARACTERISTICS	A Slight Limitations	B Slight Limitations	C Moderate Limitations	D Severe Limitations
1. SOIL DEPTH (depth to bedrock, in feet)	More than 6 and	More than 6 and	4 - 6 or	Less than 4 or
2. PERCOLATION RATE (rate of percolation of water into soil in minutes per inch)	0 - 15 and	16 - 30 and	31 - 60 or	More than 60 or
3. SEASONAL WATER TABLE (depth to shallowest water table during the year, in feet)	More than 12 and	More than 12 and	4 - 12 or	Less than 4 or
4. SLOPE (incline of the land surface, in percent)	0 - 8 and	0 - 8 and	8 - 25 or	More than 25 or
5. FLOODING POTENTIAL (overflow frequency, in years)	None	None	No more than 1 in 25	More than 1 in 25

I. If the size or boundaries of a lot with an existing on-site liquid waste system are changed so that the total design flow for the lot exceeds the total design flow limitation provided for in Subsection C of 20.7.3.301 NMAC, the permit for the system shall be void.

J. If the size or boundaries of a lot with an existing on-site liquid waste system are changed so that the total design flow for the lot does not exceed the total design flow limitation provided for in Subsection C of 20.7.3.301 NMAC, an amendment to the existing permit shall be submitted. All changes in the boundaries of a lot with an existing on-site liquid waste system permit shall be submitted to the department at the time of change. [20.7.3.301 NMAC - Rp, 20.7.3.302 NMAC, 9/1/05; A, 4/1/07]

20.7.3.302 STANDARDS; SETBACK REQUIREMENTS:

A. On-site liquid waste systems shall be located to meet setback distances, in feet, specified in the following Table 302.1 except as provided in 20.7.3.E (1) - (3) NMAC. Setback distances apply to any part of the on-site liquid waste system and its designated replacement area.

Table 302.1: Minimum setback and clearance requirements

From:	To:	Building Sewer	Treatment Unit*	Disposal Field	Seepage Pit
Property lines		clear	5 ft.	5 ft.	8 ft.
Building or structure		2 ft.	5 ft.	8 ft.	8 ft.
Distribution box		--	--	5 ft.	5 ft.
Disposal field		--	10 ft.*****	4 ft.****	10 ft.
Seepage pit		--	10 ft.	10 ft.	12 ft.
Drinking water line*****:

Other watercourses,					
Waters of the State		--	50 ft.	100 ft.	100 ft.
Retention/detention area		--	15 ft.	15 ft.	15 ft.
Seasonal high water table, bedrock and other impervious layers***		--	--	4 ft. to bottom of system	4 ft. to bottom of system

- (1) * Applies to privy pits, enclosed systems, other liquid waste treatment units.
- (2) ** Plus depth of channel.
- (3) *** Unlined privy pits shall provide clearance of at least 4 feet.
- (4) **** Plus 2 feet for each additional foot of depth in excess of 1 foot below perforated pipe.
- (5) ***** May be 5 feet when Schedule 40 PVC/DWV pipe is used.
- (6) *****Or applicable plumbing code.

B. Setback distances to watercourses, canals and arroyos shall be measured from the edge of the seasonal high water flow defined bank to the on-site liquid waste system component. Setback distances to artificially controlled lakes or reservoirs shall be measured from the closest projected shoreline at the maximum controlled water level.

[20.7.3.302 NMAC - Rp, 20.7.3.303 NMAC, 9/1/05; A, 4/1/07]

20.7.3.303 STANDARDS; CLEARANCE REQUIREMENTS:

A. Seasonal high ground water levels and seasonal high water flows shall be determined by the department either by direct observation, by the presence of mottling in the soil profile, by reliance upon the findings of a qualified professional or upon published scientific material, well records or other sources acceptable to the department. The department may adjust the measured water table to compensate for factors such as season, drought, irrigation or flooding. Compliance with seasonal high ground water table and seasonal high water flow clearances in this section shall be based on the best-documented evidence available to the department at the time of installation or modification.

B. No conventional on-site liquid waste system shall discharge liquid waste into the soil where the vertical clearance from the bottom of the absorption area to seasonal high ground water table, impervious formation or other limiting layer is less than four (4) feet of suitable soil. A reduction in this clearance may be allowed with appropriate advanced treatment or alternative disposal.

C. Unlined privy pits shall provide a clearance of no less than four (4) feet of suitable soil from the bottom of the excavation to the seasonal high ground water table, the seasonal high water flow, impervious formation or other limiting layer.

[20.7.3.303 NMAC - Rp, 20.7.3.304 NMAC, 9/1/05]

20.7.3.304 STANDARDS; PROHIBITIONS:

A. No person shall introduce into an on-site liquid waste system household hazardous wastes, solvents, fertilizers, livestock wastes or other materials of a composition or concentration not generally considered liquid waste as defined in 20.7.3 NMAC.

B. Liquid waste treatment additives, other than those approved, in writing, by advanced treatment unit manufacturers, shall not be used as a means to reduce the frequency of proper maintenance and removal of septage from a treatment unit.

C. No RV tank waste, RV dumpstation waste, drains or floor drains from animal washdown facilities, livestock, kennel waste, or other non-human generated waste shall be introduced into a residential liquid waste treatment and disposal unit.

[20.7.3.304 NMAC - Rp, 20.7.3 NMAC, 308, 309, 9/1/05]

20.7.3.305 STANDARDS; WASTE INTERCEPTORS:

A. When liquid wastes are discharged containing excessive amounts of grease, garbage, flammable wastes, sand or other ingredients that may affect the operation of an onsite liquid waste system, an interceptor for such wastes shall be installed in-line prior to the liquid waste treatment unit.

B. Installation and design of such interceptors shall comply with the uniform plumbing code or the manufacturer's recommendations.

C. Interceptors shall be installed in locations that meet minimum setback and clearance requirements of Table 303.1.

D. Waste interceptors shall be maintained in accordance with manufacturer's specifications and require a maintenance contract to be in effect at all times.

E. Waste interceptors located more than 2 feet outside the building and past the clean outs are considered to be components of the liquid waste system.

F. Waste interceptors with effluent filters are required for all mop basins

[20.7.3.305 NMAC - Rp, 20.7.3.407 NMAC, 9/1/05]

20.7.3.306 STANDARDS; SEPTAGE: Disposal of septage shall not cause a hazard to public health nor degrade a body of water. Transport and disposal of septage shall be in conformance with applicable federal, state and local regulations.

[20.7.3.306 NMAC - Rp, 20.7.3.307 NMAC, 9/1/05]

20.7.3.307 STANDARDS; ABANDONED SEWERS AND ON-SITE LIQUID WASTE SYSTEMS:

A. Every abandoned building sewer, or part thereof, shall be plugged or capped within five (5) feet of the property line using a cap or plug prescribed by the uniform plumbing code.

B. Every cesspool, holding tank, septic tank, seepage pit or other liquid waste treatment unit that has been abandoned or has otherwise been discontinued from further use or to which no waste or building sewer from a plumbing fixture is connected shall have the liquid waste pumped there from and properly disposed. The bottom of the unit shall be opened or ruptured, or the entire unit collapsed so as to prevent the unit from retaining water; or ~~The~~ unit shall be completely filled with earth, sand, gravel, concrete or other approved material.

C. The top cover or arch over the cesspool, holding tank, septic tank, seepage pit or other liquid waste treatment unit shall be removed, or collapsed, or openings created for complete filling. before filling and the filling shall not extend above the top of the vertical portions of the sidewalls or above the level of any outlet pipe until inspection or authorization by the department. After such inspection or authorization, the cesspool, holding tank, septic tank, seepage pit or other liquid waste treatment unit shall be filled to the level of the top of the ground.

D. Where on-site treatment systems are abandoned consequent to connecting any premises with a public sewer, the permittee making the connection shall fill all abandoned treatment units as required by the department within 30 days from the time of connection.
[20.7.3.307 NMAC - Rp, 20.7.3.410 NMAC, 9/1/05]

20.7.3.308 through 20.7.3.400 [RESERVED]

20.7.3.401 PERMITTING; GENERAL REQUIREMENTS:

A. No person shall install or have installed a new on-site liquid waste system or modify or have modified an existing on-site liquid waste system, unless that person obtains a permit issued by the department prior to construction of such installation or modification. Failure to obtain the required permit may result in the initiation of enforcement actions by the department.

B. No person shall construct or modify a residential or commercial unit on, or transport a residential or commercial unit onto, a lot for which an on-site liquid waste system is required unless the department has issued an on-site liquid waste system permit prior to such construction, modification or transportation.

C. No person shall construct, install or modify an on-site liquid waste system unless that person holds a valid and appropriate classification of contractor's license issued by the New Mexico construction industries division, except that a homeowner may install or modify permitted septic tanks and conventional trench or bed disposal fields. Once the department has developed a certification program pursuant to 20.7.3.904 NMAC, the contractor shall comply with the certification requirements of that section prior to constructing, installing or modifying any on-site liquid waste system. ~~Once the department has developed a homeowner certification program pursuant to 20.7.3.904 NMAC, a~~ A homeowner shall comply with the homeowner certification requirements prior to constructing, installing or modifying an on-site liquid waste system. A homeowner who self-installs a system shall not compensate any person to perform any phase of the system construction, unless that person holds a valid and appropriate classification of contractor's license issued by the New Mexico construction industries division and has complied with the department's certification requirements. Obtaining a permit from the department for the installation or modification of an on-site liquid waste system does not relieve any person from the responsibility of obtaining any other approval, license or permit required by state, city or county regulations or ordinances or other requirements of state or federal laws. The department shall not knowingly issue a permit that violates a city or county regulation issued in compliance with 74-1-14 NMSA 1978.

D. A permit is not required for graywater discharges or for systems designed for the discharge of graywater that meet the requirements of 20.7.3.810 NMAC.

E. Any person seeking a permit shall do so by submitting an application to the field office of the department having jurisdiction for the area where the system is to be installed or modified. The application shall be:

- (1) made on a form provided by the department;
- (2) accompanied by the recorded deed or other recorded description and such other relevant information as the department may reasonably require to establish lot size, boundaries, date of record and ownership; and
- (3) signed by the applicant or their authorized representative.

F. The department shall require complete and accurate information before a permit is issued for an on-site liquid waste system.

G. The department shall deny the application if the proposed system will not meet the requirements of 20.7.3 NMAC.

H. The department shall maintain a file of all permits issued and applications denied. The file shall be open for public inspection.

I. All systems shall be installed, operated and maintained in accordance with the permit and applicable regulations.

J. Unpermitted conventional systems installed or modified prior to February 1, 2002 may be issued a certificate of registration for continued operation if:

(1) the treatment unit is pumped by the owner and inspected by the department utilizing a department approved form and meets the requirements in effect at the time of the initial installation is sized according to the regulations in effect at the time of installation and or most recent modification;

(2) the disposal system is sized and dimensioned, as determined by probing, according to the regulations in effect at the time of installation or most recent modification and appears to be functioning properly; and

(3) the appropriate permit fee is paid for the system installed.

K. Unpermitted conventional systems installed or modified on or after February 1, 2002 may be permitted if:

(1) the treatment unit is adequately exposed to allow full inspection by an approved department inspector utilizing a department approved inspection form and the disposal system is probed and dimensions recorded and sufficiently exposed to determine all relevant aspects of construction and materials, including, but not limited to: soil type; pipe size, type and material; proper placement of aggregate and cover; and proper trench size, slope and spacing; All relevant aspects of disposal system dimensions, construction and materials listed above shall be noted on the department approved inspection form. Pictures shall be taken where appropriate and included with the inspection form.

(2) the on-site liquid waste system is determined, upon inspection by the department, to meet all current requirements of 20.7.3 NMAC; and

(3) the appropriate permit fee is paid; and

(4) at the discretion of the Bureau Chief of the Environmental Health Division of the department, an administrative penalty is paid in accordance with Environmental Improvement Act, Chapter 74, Article 1 NMSA 1978.

L. If the department finds that specific requirements in addition to or more stringent than those specifically provided in 20.7.3 NMAC are necessary to prevent a hazard to public health or the degradation of a body of water, the department shall issue permit conditions with more stringent requirements or additional specific requirements. Such additional or more stringent requirements may apply to system design, siting, construction, inspection, operation and monitoring and shall be in accordance with 20.7.3.402.D, NMAC.

M. The installation or modification of an on-site liquid waste system shall be in accordance with the permit and all regulatory requirements of 20.7.3 NMAC. Any change from the permitted installation or modification, must receive department approval prior to implementation. An amendment to the permit shall be submitted within 7 days of the completion of the installation.

N. No person shall operate or use an on-site liquid waste system until the department has granted final approval of the system after installation or modification of the system is completed. No person shall occupy a newly constructed or transported dwelling for which an on-site liquid waste system is required until the department has granted such final approval and, if applicable, until the governmental body with authority to regulate construction has granted an occupancy permit. The department shall not grant final approval if the system as installed or modified does not meet the requirements of 20.7.3 NMAC. No permit is complete and final approval shall not be granted until a final inspection is conducted by the department, either in person or photographically. When final approval is granted, the department shall execute and sign the final inspection and final approval form and notify the applicant and installer of its action.

O. The department may cancel a permit if the installation or modification of the on-site liquid waste system has not been completed within one (1) year after issuance subject to 20.7.3.402. E, NMAC. The department, using the contact information provided on the permit application, shall attempt to contact the applicant and installer, and shall attempt to perform a final inspection prior to canceling any permit. If a permit is canceled, the department shall notify the permittee and installer of the decision in writing and the reason for cancellation and appropriate regulations cited. The notice to the permittee shall also inform the permittee of his right of appeal pursuant to 20.7.3.406 NMAC.

P. The department shall void any permit, variance, or certificate of registration if the department determines that material information in the application is false, incomplete or inaccurate and that the correct information would have resulted in the department denying the original application. The department shall notify the permittee of the decision in writing and the reason for cancellation and appropriate regulations cited.

Q. All permits, variances, exhibits, attachments, approvals, rejections, are official documents and property of the State of New Mexico and shall be received, handled, stored, treated, preserved, and archived in accordance with the Public Records Act 14-3-1 - 23 NMSA 1978 and the Executive Records Retention and Disposition Schedule New Mexico Environment Department 1.18.667 NMAC.

R. The Department or any of its representatives shall not destroy, deface, alter or modify, in any way, any permit, certificate of registration, variance, exhibit, or attachment.

S. Department decisions involving discretion on any permit or certificate of registration regarding any requirement of 20.7.3 NMAC must be in writing and may only be exercised by District Managers with written concurrence of the Bureau Chief. The written decision shall be signed by the District Manager and Bureau Chief and becomes an attachment to the permit, or certificate of registration.
[20.7.3.401 NMAC - Rp, 20.7.3.201 NMAC, 9/1/05; A, 4/1/07]

20.7.3.402 PERMITTING; CONVENTIONAL TREATMENT AND DISPOSAL SYSTEMS:

A. For liquid waste systems utilizing conventional treatment and conventional disposal, the department may require the following information to be included with the application.

(1) A detailed site plan, ~~completely~~ reasonably dimensioned, showing ~~direction and approximate slope of surface;~~ the location of all present or proposed ~~retaining walls;~~ arroyos, canals, irrigation or drainage channels; ~~water supply lines,~~ wells or other water sources; other on-site liquid waste systems; paved areas, roadways and structures; location of the proposed liquid waste system and replacement area with relation to lot lines and structures; and to all sources of water supply located within two-hundred (200) feet.

(2) Sufficient details of construction, materials and components necessary to assure compliance with the requirements of 20.7.3 NMAC.

(3) A ~~detailed log of soil formations~~ determination of soil type and structure and ground water level as determined by soil borings or a test hole(s) dug in close proximity to any proposed seepage pit or disposal field.

(4) A set of floor plans or verification of the total flow for the ~~structure(s)~~ facility(ies) served by the liquid waste system.

(5) Any additional information that may be necessary to demonstrate that the permit will not create a hazard to public health or degrade a body of water.

(6) prior to final inspection, a copy of the delivery ticket for gravel delivered to the site for pipe and gravel disposal systems.

(7) A copy of the installers appropriate, current, and valid contractor's license issued by the Construction Industries division of the Regulation and Licensing Bureau of the State of New Mexico which is limited to the following designations: MM98, MML, MS1, and MS3.

(8) prior to final inspection a copy of all photographic inspection photos in lieu of in - person inspections conducted pursuant to 20.7.3.203.B.(1)

~~B. If the department finds that specific requirements in addition to or more stringent than those specifically provided in 20.7.3 NMAC are necessary to prevent a hazard to public health or the degradation of a body of water, the department shall issue permit conditions with more stringent requirements or additional specific requirements. Such additional or more stringent requirements may apply to system design, siting, construction, inspection, operation and monitoring.~~

~~C. The installation or modification of an on-site liquid waste system shall be in accordance with the permit and all regulatory requirements of 20.7.3 NMAC. Any change from the permitted installation or modification, including a change of contractor, must receive department approval prior to implementation. An amendment to the permit shall be submitted within 7 days of the completion of the installation.~~

~~D. No person shall operate or use an on-site liquid waste system until the department has granted final approval of the system after installation or modification of the system is completed. No person shall occupy a newly constructed or transported dwelling for which an on-site liquid waste system is required until the department has granted such final approval and, if applicable, until the governmental body with authority to regulate construction has granted an occupancy permit. The department shall not grant final approval if the system as installed or modified does not meet the requirements of 20.7.3 NMAC.~~

~~E. The department may cancel a permit if the installation or modification of the on-site liquid waste system has not been completed within one (1) year after issuance or if the department determines that material information in the application is false, incomplete or inaccurate and that the correct information would have resulted in the department denying the original application. If a permit is canceled, the department shall notify the permittee of the decision in writing and the reason for cancellation and appropriate regulations cited.~~

F. B Except as otherwise provided in Subsection ~~G~~ C of this section, the department shall, within ten (10) working days after receipt of the completed application, grant the permit, grant the permit subject to conditions or deny the permit and shall notify the applicant of the action taken. Within five working days, the department shall determine if a permit application is administratively complete. The department shall notify the applicant if the application is administratively incomplete verbally and in writing within the 5 working day time frame. The determination that an application is administratively complete does not mean that the proposed system meets the requirements of 20.7.3 NMAC.

G. C. If the department's initial review of the application indicates that the imposition of more stringent requirements may be necessary pursuant to Subsection M of 20.7.3.201 NMAC or Subsection B of 20.7.3.402 NMAC, the department may extend the time for the review of the application until twenty (20) working days after receipt of the completed application provided that the department shall notify the applicant of such extension within ten (10) working days after receipt of the completed application.

H. D. When the permit is granted subject to conditions, denied or more stringent conditions applied, the department shall notify the permittee, cite the reason for the action, shall refer to the appropriate regulation(s) and be given in writing.

E. The department shall provide owners of conventional liquid waste treatment systems, with effluent filters, a brochure explaining the proper care and maintenance of effluent filters.
[20.7.3.402 NMAC - Rp, 20.7.3.201 NMAC, 9/1/05]

20.7.3.403 PERMITTING; ADVANCED TREATMENT OR ALTERNATIVE DISPOSAL:

A. An application for a permit proposing advanced treatment (with conventional or alternative disposal) or alternative disposal (with conventional treatment) may be submitted.

B. Applications shall include the information required for a conventional treatment or disposal system, and:

(1) for applications proposing advanced treatment with either conventional or alternative disposal:
(a) the applicant shall demonstrate that the system has been approved by the department and shall include operation and maintenance information, monitoring plans and maintenance agreements;
(b) the applicant must demonstrate the applicability and effectiveness of the technology on the site where it is to be used;

(c) a copy of all signed maintenance contracts between the property owner and a certified maintenance service provider shall be attached to the application;

(d) the property owner shall have all maintenance contracts in effect for the duration of the permit; and

(e) the property owner shall provide to the department copies of all maintenance contracts at the time of permit application, property transfer, or within 30 days of contract issuance replacement or renewal; and

(2) for applications proposing alternative disposal with conventional treatment, the applicant shall include details of design, sizing, construction and operation. Such disposal systems include, but are not limited to, mounds, evapotranspiration, ~~seepage pits~~, pressure dosed systems, alternating leach fields, non-discharging constructed wetlands, non-gravity systems and approved surface applications.

C. For applications proposing advanced treatment or alternative disposal, the department shall, within twenty (20) working days after receipt of the completed application, grant the permit, grant the permit subject to conditions or deny the permit and shall notify the applicant of the action taken.

D. When the permit is granted subject to conditions or the application denied, the reason for the action shall refer to the appropriate regulation and be given in writing.

E. For advanced treatment systems, the authorization to operate the system shall be valid until a change of ownership of the system occurs. At the time of transfer of ownership, the new owner shall submit an amendment of permit updating the ownership change and also provide the department a copy of the valid maintenance contract in the name of the new owner.

[20.7.3.403 NMAC - N, 9/1/05; A, 4/1/07]

20.7.3.404 PERMITTING; EXPERIMENTAL SYSTEMS:

A. The department may issue a permit, on an individual basis, for the installation of an experimental on-site liquid waste system. The permit applicant must demonstrate that the proposed system, by itself or in combination with other on-site liquid waste systems, will neither cause a hazard to public health nor degrade a body of water and that the proposed system will provide a level of treatment at least as effective as that provided by on-site liquid waste systems, except privies and holding tanks, that meet the requirements of 20.7.3 NMAC.

B. Prior to the approval of a permit for an experimental on-site liquid waste system, the experimental system shall be reviewed by the technical advisory committee pursuant to 20.7.3.905 NMAC.

C. A field demonstration, which meets the following requirements, shall be required for a proposed experimental system.

(1) Conditions for installation, operation, maintenance and monitoring at the proposed demonstration site shall be reviewed and approved by the department.

(2) On-site testing and evaluation, as required by the department and paid for by the permit applicant, shall be performed for a period specified by the technical advisory committee. The results of the evaluation period shall be forwarded to the technical advisory committee for review and further action.

(3) A contingency plan shall be included to provide liquid waste treatment that meets the requirements of 20.7.3 NMAC if the experimental system fails to meet the requirements of 20.7.3 NMAC.

(4) A copy of a signed maintenance contract between the property owners and a certified maintenance service provider shall be attached. The property owner shall have a maintenance contract in effect for the duration of the permit. The property owner shall provide to the department copies of all maintenance contracts required to be in effect within 30 days of contract issuance or renewal.

[20.7.3.404 NMAC - Rp, 20.7.3.306 NMAC, 9/1/05]

20.7.3.405 PERMITTING; VARIANCES:

A. Any person seeking a variance from the requirements contained in 20.7.3 NMAC shall do so by filing a written petition with the field office of the department having jurisdiction for the area where the system is to be installed.

B. The petition shall be made on a form provided by the department, signed by the petitioner or an authorized representative and accompanied by relevant documents or materials that supports the petitioner's request for a variance. The petitioner shall give notice to all landowners sharing a common boundary and within 100 feet when sharing a common right-of-way. If no property boundary is within 1000 feet of the system, notification is not required, except as otherwise provided in this part. In addition, all parties sharing a private domestic well located on the lot where the variance is proposed shall be notified. Said notice shall include the nature of the variance petition, the date of submission of the petition to the department, the address of the department field office to which the petition is being submitted and the time frame for department action as provided in Subsection D of 20.7.3.405 NMAC below.

C. Upon review of the petition, the department may require the submittal of other relevant information to provide reasonable assurance that the conditions set forth in Paragraphs (1) and (2) of Subsection E of 20.7.3.405 NMAC are met.

D. The department shall, after a minimum of ten (10) but not more than twenty (20) working days following receipt of the completed petition, grant the variance, grant the variance subject to conditions or deny the variance and shall so notify the applicant and any other person making a written submission concerning the petition. The reason for the department's action shall be provided in writing and the appropriate regulations cited.

E. The department shall deny the variance petition unless the petitioner establishes by clear and convincing a preponderance of the evidence that:

(1) the proposed on-site liquid waste system will, by itself or in combination with other on-site liquid waste systems or other discharges subject to 20.6.2.3000 through 20.6.2.3114 NMAC, neither cause a hazard to public health or degrade any body of water; and

(2) granting the variance will result in public health and environmental protection equal to or greater than the minimum protection provided by the varied requirement.

F. The department shall maintain a file of all variances granted and denied. The file shall be open for public inspection.

G. A "variance" is an official record and property of the State of New Mexico which is subject to the Public Records Act 14-3-1 - 23 NMSA 1978 and the Executive Records Retention and Disposition Schedule New Mexico Environment Department 1.18.667 NMAC;

[20.7.3.405 NMAC - Rp, 20.7.3.202 NMAC, 9/1/05; A, 4/1/07]

20.7.3.406 PERMITTING; APPEALS:

A. Any affected person who is dissatisfied with any action taken by the department on a permit application, a certificate of registration, or variance petition or any other action taken by the department may appeal to the secretary. The request must be made in writing and delivered to the secretary, by registered letter return receipt requested, delivery service with written acceptance, or in person with the secretary or his agent signing upon receipt, within fifteen (15) working days after notice of the department's action has been issued received. Unless an appeal is received by delivered to the secretary within fifteen (15) working days after notice to the applicant or petitioner of the department's action has been received, the decision of the department shall be final.

B. If an appeal is received delivered within the fifteen (15) working day time limit, the secretary shall hold a hearing within fifteen (15) working days after receipt of the request. The secretary shall notify the person who requested the hearing of the date, time and place of the hearing by certified mail. If the appeal is on a variance petition, the secretary shall also notify all persons involved under Subsection B of 20.7.3.405 NMAC of the hearing date, time and place of the hearing by certified mail.

C. In the appeal hearing, the burden of proof is on the person who requested the hearing. Where the department requires more stringent requirements pursuant to Subsection M of 20.7.3 NMAC, the burden of proof of the necessity for the more stringent requirements shall be upon the department.

D. Appeal hearings shall be held at a place designated by the secretary in the area where the proposed on-site liquid waste system is to be located, unless other mutually agreed upon arrangements are made. The secretary may designate a qualified person to conduct the hearing and ~~make a final decision or~~ make recommendations for a final decision. The secretary's hearing notice shall indicate who will conduct the hearing and make the final decision.

E. Upon request, the hearing shall be recorded. The person who requests the recording shall pay recording costs.

F. In appeal hearings, the rules governing civil procedure and evidence in district court do not apply. However prior to the hearing, the hearing officer shall inform the parties which rules of procedure and evidence will be in effect. Hearings shall be conducted so that all relevant views, arguments and testimony are amply and fairly presented without undue repetition. The secretary shall allow department staff and the hearing requestor to call and examine witnesses, to submit written and oral evidence and arguments, to introduce exhibits and to cross-examine persons who testify. All testimony shall be taken under oath. At the end of the hearing, the secretary shall decide and announce if the hearing record will remain open and for how long and for what reason it will be left open.

G. Based upon the evidence presented at the hearing, the secretary shall sustain, modify or reverse the action of the department. The secretary's decision and findings shall be by written order within fifteen (15) working days following the close of the hearing record. The decision shall state the reasons therefore and shall be sent by certified mail to the hearing requestor and any other affected person who requests notice. Appeals from the secretary's final decision are by Rule 1-075 NMRA.

[20.7.3.406 NMAC - Rp, 20.7.3.203 NMAC, 9/1/05]

20.7.3.407 through 20.7.3.500 [RESERVED]

20.7.3.501 DESIGN; LIQUID WASTE TREATMENT UNITS; GENERAL:

A. Plans for septic tanks shall be submitted to the department for approval and certification. Such plans shall show all dimensions, reinforcement, structural calculations, and the items included in 20.7.3.J.7.(a) and (b) NMAC listed below, and such other pertinent data as may be required by the department. Prior to certification or recertification, the department engineer shall conduct a scheduled on-site inspection of in - state septic tank manufacturing facilities at least once a year and such unannounced inspections as are needed to assure product quality and provide consumer protection. The department shall not recertify septic tanks manufactured within the state nor collect the fees for recertification unless the inspection has been performed within one year of the recertification date. The engineer performing the inspection for certification or recertification shall prepare, date and sign a written report documenting compliance with each individual requirement of 20.7.3.501. Plans for advanced treatment units shall be submitted to the department for review by the technical advisory committee pursuant to 20.7.3.905 NMAC. Plans for advanced treatment units shall meet the requirements set forth by the technical advisory committee.

B. All treatment units and tanks, regardless of material or method of construction and unless otherwise specified in 20.7.3 NMAC, shall:

(1) be designed and constructed to withstand all reasonable lateral earth pressures under saturated soil conditions with the tank empty;

(2) have a minimum live load at the surface of 300 pounds per square foot with twelve (12) inches of cover unless heavier loads are expected;

(3) not be subject to excessive corrosion or decay;

(4) have the manufacturer's name, New Mexico registration number, year of construction, and tank capacity in gallons, and individual unit identification number permanently displayed on the tank immediately above the outlet pipe;

(5) be watertight;

(6) not be constructed or manufactured on site, in the ground, when saturated soil conditions during construction are closer than three (3) inches to the bottom of the excavation;

(7) be protected against flotation under high ground water conditions and for units installed in floodplains;

(8) be installed so that they are easily locatable and accessible; and

(9) be approved by the international association of plumbing and mechanical officials (IAPMO); meet IAPMO minimum standards as demonstrated to the department by approved laboratory testing; or meet all requirements of Sections 20.7.3.501 and 502 NMAC; or be recommended by the technical advisory committee and approved by the department.

- C. Treatment units may be constructed of the following materials:
 - (1) precast reinforced concrete;
 - (2) poured-in-place concrete;
 - (3) fiberglass;
 - (4) polyethylene; or
 - (5) other materials as approved in writing by the department.
- D. Metal, wooden, concrete block and homeowner built tanks are prohibited.
- E. A secure lid shall consist of one or more of the following:
 - (1) a padlock;
 - (2) a twist lock cover requiring special tools for removal;
 - (3) covers weighing 58 pounds or more, net weight;
 - (4) a hinge and hasp mechanism that uses stainless steel or other corrosion resistant fasteners to fasten the hinge and hasp to the lid and tank for fiberglass, metal or plastic lids; or
 - (5) other mechanisms approved by the department.
- F. Wherever vehicular traffic is anticipated to cross over the liquid waste treatment unit, pump station or pump chamber, the unit shall be designed by a professional engineer to withstand the anticipated traffic loading.
- G. All solid wall pipe connections, fittings and penetrations shall be watertight.
- H. Each tank shall be structurally designed to withstand all anticipated earth or other loads. All septic tank covers shall be capable of supporting an earth load of not less than three hundred (300) pounds per square foot when the maximum fill coverage does not exceed three (3) feet.
- I. Fiberglass or reinforced plastic treatment units shall be certified to IAPMO standards. Fiberglass or plastic tanks shall be installed according to the manufacturer's instructions. A copy of the manufacturer's installation instructions shall be available for inspection by the department at the installation site.
- J. Concrete liquid waste treatment units.
 - (1) Minimum concrete thickness.
 - (a) Walls: Two and one-half (2 1/2) inches in thickness.
 - (b) Floors: Three (3) inches in thickness.
 - (c) Covers: Three (3) inches in thickness.
 - (2) Floors shall be an integral part of the tank.
 - (3) Where sections are used, tongue and groove joints or keyways shall be used and shall be sealed with an approved sealer and shall be watertight.
 - (4) Poured-in-place tanks shall be designed and certified by a professional engineer.
 - (5) All concrete liquid waste treatment units, except those approved for use utilizing concrete meeting type V specifications, shall be protected from corrosion by coating internally with an approved bituminous coating or by other acceptable means. The coating shall cover all exposed concrete and shall extend to at least 6 inches below the waterline.
 - (6) Treatment unit construction materials shall meet the following minimum specifications:
 - (a) concrete strength - 3500 4000 psi @ 28 days, density 140 PCF;
 - (b) cement Portland type II or V per ASTM C150-04ae1;
 - (c) admixtures per ASTM C233-04; and
 - (d) reinforcing per ASTM A615 for wire fabric, grade 40/60 R'd or equivalent.
 - (7) Manufacturers of concrete septic tanks shall meet minimum requirements for concrete septic tank construction, as promulgated by the department, for effective regulation, such as:
 - (a) shall have in place a standardized quality assurance/quality control (QA/QC) plan.
 - (b) shall document in - house testing of materials and tracking of materials used in individual units manufactured
- ~~(7)~~ (8) Be installed level on undisturbed or compacted soil, 3/8 inch pea gravel or sand.

[20.7.3.501 NMAC - Rp, 20.7.3.402 NMAC, 9/1/05; A, 4/1/07]

20.7.3.502 DESIGN; CONVENTIONAL TREATMENT UNITS; CONSTRUCTION STANDARDS:

A. All conventional treatment units, regardless of material or method of construction and unless otherwise specified in this part, shall be designed to produce a clarified effluent and shall provide adequate space for sludge and scum accumulations based on a minimum hydraulic retention time of 24 hours at maximum sludge depth and scum accumulation.

B. Septic tanks shall have a minimum of two (2) compartments. The inlet compartment of a septic tank shall be two-thirds (2/3) of the total liquid capacity of the tank, but not less than five-hundred (500) gallons liquid capacity, and shall be at least three (3) feet in width and five (5) feet in length. Liquid depth shall be not less than two (2) feet and six (6) inches nor more than six (6) feet. The second compartment of a septic tank shall have a liquid capacity of one-third (1/3) of the total capacity of such tank. In septic tanks having over fifteen hundred (1500) gallons capacity, the second compartment may not be less than three (3) feet in length.

C. Multiple tanks installed in series may be allowed with department approval provided the total tank volume is at least 2.5 times the total design flow. Minimum tank sizes are as follows:

- (1) for flows up to 1000 gpd, the capacity of each tank must be at a minimum 900 gallons; and
- (2) for flows between 1000 and 2000 gpd, the capacity of each tank must be a minimum of 1200 gallons.

D. Access to each septic tank shall be provided by at least two access openings, each of which shall be at least twenty (20) inches in minimum dimension. One access opening shall be placed over the inlet and one access opening shall be placed over the outlet. Whenever a first compartment exceeds twelve (12) feet in length, an additional access opening shall be provided over the baffle wall. Each access opening shall be extended to the surface of the ground with a secure lid. These extensions shall be twenty-four (24) inches in diameter for depths of 0-3 feet and for depths greater than 3 feet shall be at least 30 inches in diameter with an approved lid that conforms to Subsection E of 20.7.3.501 NMAC. If the extensions are made of concrete, they shall be coated with a coating approved by the department. "Wet-or-dry" coatings and mastics, or other water-based materials are not acceptable. Materials for the extensions shall be approved by the department.

E. The inlet and outlet pipe openings shall be not less in size than the connecting sewer pipe and shall have a watertight seal which shall meet the ASTM standard C 1644 - 06 or comparable approved by the department. The vertical leg of round inlet and outlet fittings shall not be less in size than the connecting sewer pipe nor less than four (4) inches. A baffle type fitting shall have the equivalent cross-sectional area of the connecting sewer pipe and not less than a four (4) inch horizontal dimension when measured at the inlet and outlet pipe inverts, unless it is a pumped system.

F. The inlet and outlet pipe or baffle shall extend at least four (4) inches above and at least twelve (12) inches below the water surface. The invert of the inlet pipe shall be at a level not less than two (2) inches above the invert of the outlet pipe. Inlet and outlet pipe or baffles shall be, at a minimum, schedule 40 PVC, ABS or cast-in-place concrete. Such approved pipe shall be SDR 35 or better.

G. Inlet and outlet pipe fittings or baffles and compartment partitions shall have a free vent area equal to the required cross-sectional area of the building sewer or private sewer discharging into the septic tank to provide free ventilation above the water surface from the disposal field or seepage pit through the septic tank, building sewer and stack to the outer air.

H. All septic tanks shall include an effluent filter approved by the department, installed ~~on~~ in the outlet tee of the tank or external to the tank before final discharge, with an access riser installed to grade. Effluent filters shall have a handle or other mechanism to remove the filter that extends to within six inches (6") of the top of the access riser. Concrete tanks manufactured with effluent baffles shall not be modified to remove those baffles; external effluent filters shall be used for concrete tanks with effluent baffles.

I. The sidewalls, except on cylindrical tanks, shall extend at least nine (9) inches above the liquid depth. The cover of the septic tank shall be at least two (2) inches above the back vent openings.

J. Partitions or baffles between compartments shall be of solid, non-corrosive, durable material and shall extend at least four (4) inches above the water level. Metal or wooden baffles are prohibited.

(1) An inverted fitting equivalent in size to the tank inlet, but in no case less than four (4) inches in size, shall be installed in the inlet compartment side of the baffle with the bottom of the fitting placed midway in the depth of the liquid.

(2) If a horizontal slot is used, the slot shall extend the width of the tank, be no more than 6 inches in height and located midway in the depth of the liquid.

K. Fiberglass or reinforced plastic tanks shall be certified to IAPMO standards.

(1) Each access and inspection hole cover shall have approved fasteners not subject to deterioration by liquid or gases normally present in septic tank systems to assure that the covers will remain in place. All covers shall overlap the hole by a minimum of two (2) inches in all directions.

(2) Each tank shall be free from visual defects such as foreign inclusions, dry spots, air bubbles, pimples and delamination. The inner and outer surfaces shall have a smooth, continuous finish with no exposed fibers. Both the inner and outer surfaces shall have a continuous resin rich surface and no fibers shall be exposed either directly from cracks, porosity or holes, or indirectly through bubbles that may break and expose fibers.

[20.7.3.502 NMAC - Rp, 20.7.3.402 NMAC, 9/1/05]

20.7.3.503 through 20.7.3.600 [RESERVED]

20.7.3.601 DESIGN; ADVANCED TREATMENT SYSTEMS; GENERAL:

A. The level of treatment required and the type of disposal allowed shall be determined by the site evaluation and the character of the waste to be treated and disposed using 20.3.7.605 NMAC. A liquid waste system with an approved non-discharging disposal design may be installed in lieu of the required advanced treatment system.

B. All proprietary treatment systems proposed for secondary or tertiary treatment must meet the performance standards of 20.7.3.602-604 NMAC, and must be certified by the technical advisory committee for that level of treatment. Limitations on the performance of these units due to the effects of cold weather or altitude shall be disclosed to the WTAC by the proprietary treatment system applicant.

C. Any design of a conventional or advanced treatment system with site or other limiting conditions that cannot be addressed by following a standard design from alternative resources including those listed in 20.7.3.8.B recognized by the department shall be designed and sealed by a professional engineer.

D. Ventilation of treatment units providing advanced treatment shall be in accordance with the manufacturer's recommendation.

E. If an adequate sampling port or sampling point is not provided in the design of an advanced treatment system, the installer shall provide an acceptable sampling port in the effluent line for the treatment unit. The installer may propose a sampling port configuration.

(1) An acceptable sampling port for a residential unit may be manufactured from an 8-inch diameter pipe. The sample port shall be watertight. The water depth in the pipe shall be at least 4 inches. The outlet will be 1 inch lower than the inlet.

(2) If there are significant settled solids in the sampling well, the sampler shall clean out the sampling port. The sample can be collected either from the influent overflow or from the water collected in the sample port after cleaning.

[20.7.3.601 NMAC - N, 9/1/05; A, 4/1/07]

20.7.3.602 DESIGN; SECONDARY TREATMENT STANDARDS:

A. Secondary treatment systems shall meet the following requirements:

(1) 5-day biochemical oxygen demand not to exceed a 6-sample rolling average of 30 mg/l with no single sample to exceed 60 mg/l; and

(2) total suspended solids not to exceed a 6-sample rolling average of 30 mg/l with no single sample to exceed 60 mg/l.

B. Secondary treatment systems and the disposal from secondary treatment systems shall meet the specific site conditions set forth in 20.7.3.605 NMAC.

[20.7.3.602 NMAC - N, 9/1/05]

20.7.3.603 DESIGN; TERTIARY TREATMENT STANDARDS:

A. Tertiary treatment systems shall provide nutrient removal in addition to secondary treatment.

B. Utilizing the standard loading equation, $(\text{flow (gpd)} \times \text{conc. (mg/l)} \times 8.34 \text{ lbs./gal.} \times 365 \text{ days/yr}) / 1,000,000 = \text{lbs./yr/ac.}$, and assuming an average of 60 mg/l of TN in the septic tank effluent and a maximum flow of 500 gpd/ac, the following simplified equation shall be used for determining the required TN concentration allowed for a specific lot size: $\text{total nitrogen concentration (in mg/l)} = [\text{lot size (in acres)} / \text{design flow (in gpd)}] \times 30,000$. The concentration limit shall be based on a 6-sample rolling average with no single sample exceeding twice the concentration limit.

C. Tertiary treatment systems and the disposal from tertiary treatment systems shall meet the specific site conditions set forth in 20.7.3.605 NMAC.

[20.7.3.603 NMAC - N, 9/1/05]

20.7.3.604 DESIGN; DISINFECTION TREATMENT STANDARDS:

A. Systems requiring disinfection shall provide treated effluent that shall not exceed 200 colony forming units (CFUs) of fecal coliform bacteria per 100 ml.

B. Disinfection is required to meet the specific site conditions set forth in 20.7.3.605 NMAC.

C. When disinfection is required, the effluent shall be subject to a minimum of secondary treatment prior to disinfection.

[20.7.3.604 NMAC - N, 9/1/05]

20.7.3.605 DESIGN; MINIMUM REQUIRED TREATMENT LEVELS FOR SITE CONDITIONS:

A. The required level of treatment shall be based on the most restrictive combination of siting conditions.

B. The following treatment levels are required for the soil types as described in Table 703.1:

- (1) type Ia - secondary treatment and disinfection except as noted in Subsection F or 20.7.3.703

NMAC:

;

- (2) type Ib, II, and III - primary treatment; and

- (3) type IV - ~~primary treatment with an appropriate disposal method as approved by the department.~~

secondary treatment with a timed low-pressure dosed disposal system is required. In sizing the disposal system for Type IV, the loading rate of 5.0 sf/gpd is based on primary treated effluent. Because secondary treatment is required, Section 20.7.3. 703M NMAC allows for up to a 30% reduction in the required absorption area.

C. The following treatment levels are required for the depth of suitable soil:

- (1) greater than or equal to 4 feet of suitable soil - primary treatment;
(2) 1 to less than 4 feet of suitable soil - secondary treatment and disinfection; and
(3) no discharge with less than 1 foot of suitable soil to groundwater, karst or fractured bedrock.

D. The following treatment levels are required for hydraulic loading rates and lot size:

(1) less than or equal to 500 gallons per day per acre with a minimum lot size of 0.75 acre - primary treatment; and

- (2) greater than 500 gallons per day per acre or less than 0.75 acre - tertiary treatment.

(3) For lots less than 3/4 acre overlaying naturally occurring anoxic groundwater, secondary treatment shall be required and tertiary treatment may be required. To be exempt from tertiary treatment requirements, the permit applicant shall show by ~~clear and convincing~~ a preponderance of the evidence that the discharge of liquid waste shall not degrade a body of water.

E. The following treatment levels are required for setbacks as described in Table 20.7.3.302.1

NMAC:

- (1) For liquid waste treatment and disposal systems that meet the requirements of Table 20.7.3.302.1

NMAC - primary treatment

(2) For systems with disposal less than 100 feet but more than 50 feet from a private or irrigation well, waters of the state, or less than 200 feet but more than 100 feet from a public well - secondary treatment and disinfection

(3) For systems with disposal less than 50 feet but more than 25 feet from a private or irrigation well, waters of the state, or less than 100 feet but more than 50 feet from a public well - tertiary treatment and disinfection with monthly testing.

~~E. F.~~ A non-discharging system, except for holding tanks, may be used in lieu of advanced treatment.

~~F. G.~~ A mound system or elevated system in accordance with 20.7.3.807 NMAC may be used to meet clearance requirements or to overcome soil type limitations in lieu of advanced treatment.

~~G. H.~~ If the existing level of nitrate in the groundwater exceeds 5 mg/l, a more advanced level of nitrogen reduction as set forth in Subsection B of 20.7.3.603 NMAC may be required. If the existing level of nitrate in the groundwater exceeds 7 mg/l, a more advanced level of nitrogen reduction as set forth in Subsection B of 20.7.3.603 NMAC shall be required.

[20.7.3.605 NMAC - N, 9/1/05; A, 4/1/07]

20.7.3.606 through 20.7.3.700 [RESERVED]

20.7.3.701 DESIGN; CONVENTIONAL DISPOSAL FIELD; DESIGN AND CONSTRUCTION:

A. For conventional systems, the distribution lines shall have an inside diameter of no less than four (4) inches. Perforated pipe shall have two rows of holes and a minimum perforated area of one and one-half (1 ½) square inches per linear foot. Perforations shall be located not less than 30 degrees or more than 60 degrees from

the vertical on either side of the center line of the bottom of the pipe. All plastic pipe and fittings shall conform to the current and appropriate ASTM standards. End caps shall be installed on all distribution lines.

B. Before placing aggregate or drain lines in a prepared excavation, all smeared or compacted surfaces shall be removed from trenches by raking to a depth of one (1) inch and the loose material removed. Aggregate shall be placed in the trench to the depth and grade required. Drain lines shall be placed on the aggregate in an approved manner. The drain lines shall then be covered with aggregate to a minimum depth of two (2) inches and then covered with untreated building paper, straw or similar porous material to prevent closure of voids with earth backfill. When geotextile fabric is utilized, no aggregate cover of the drainlines is required. No earth backfill shall be placed over the aggregate cover until authorized or approved by the department or photographed in compliance with 20.7.3.203.B.(1) NMAC.

C. The department shall allow drainfields for proprietary systems to be sized in accordance with recommendations and findings by the technical advisory committee that have been approved by the secretary. The technical advisory committee shall make its findings and recommendations upon standardized, objective evaluations in accordance with Section 9-7A-15 NMSA 1978. Drainfields for proprietary systems shall not be reduced in size by more than 30% in comparison to a conventional system.

D. Capped inspection ports shall be constructed, at a minimum, of 4 inch diameter, SDR 35 or better pipe installed at the end of each trench, provide inspection access to the bottom of the trench and terminate at finished ground level. Inspection ports may be installed below grade if located in a protective enclosure and locatable with GPS coordinates or a metal detector.

E. If seepage pits are used in combination with disposal fields, the aggregate in the trenches shall terminate at least 10 feet from the pit excavation and the line extending from such points to the seepage pit shall be constructed of approved pipe with watertight joints.

F. Where two (2) or more drain lines are installed, an approved distribution box of sufficient size to receive lateral lines shall be installed at the head of each disposal field. The inverts of all outlets shall be level and the invert of the inlet shall be at least one (1) inch above the outlets. Distribution boxes shall be designed to insure equal flow and shall be installed on a level base in natural undisturbed or compacted soil or on a concrete footing or according to manufacturer's recommendations. Access to the distribution box shall be provided at the ground level. However, the installer, ~~after approval by the department,~~ may install in lieu of a distribution box a tee fitting and a distribution header to multiple trenches provided that the tee and header pipe are level.

(1) Concrete distribution boxes shall be coated on the inside with bituminous coating or other approved method acceptable to the department.

(2) All laterals from a distribution box to the disposal field shall be approved pipe with watertight joints. Multiple disposal field laterals, wherever practicable, shall be of uniform length.

(3) Connections between a septic tank and distribution box shall be laid with approved pipe with watertight joints on natural ground or compacted fill or appropriate bedding material. Such approved pipe shall be SDR 35 or better.

G. When more than five-hundred (500) lineal feet of leach line is required, a low-pressure dosed system shall be used.

H. Disposal fields shall be constructed as follows:

	MINIMUM	MAXIMUM
Number of drain lines	1 per field	
Length of each line	--	155 160 ft.
Bottom width of trench	12 in.	36 in.
Depth of earth cover of lines	9 in.	--
Depth of Trench	--	6 ft.*
Grade of lines	level	3 inch/100 ft.
Aggregate under drain lines	6 in.	--
Aggregate over drain lines with:		
geotextile fabric	0 in.	--
other material	2 in.	--

* May be up to 3 feet deeper than the frost line

I. Minimum spacing between trenches or leaching beds shall be four (4) feet plus (2) feet for each additional foot of depth in excess of one (1) foot below the bottom of the drain line. Distribution drain lines in leaching beds

shall not be more than six (6) feet apart on centers and no part of the perimeter of the leaching bed shall be more than three (3) feet from a distribution drain line.

J. When necessary to prevent line slope in excess of 3 inches per 100 feet, absorption trenches or beds shall be stepped. The lines between each horizontal section shall be made with watertight joints and shall be designed so each horizontal trench or bed shall be utilized to the maximum capacity before the effluent shall pass to the next lower trench or bed. The lines between each horizontal absorption section shall be made with approved watertight joints and installed on natural or unfilled ground.

K. Disposal fields, trenches and leaching beds shall not be paved over or covered by concrete or any material that can reduce or inhibit any possible evaporation of effluent.

[20.7.3.701 NMAC - Rp, 20.7.3.405 NMAC, 9/1/05; A, 4/1/07]

[For specifications for drainfield pipes, see the following standards: D3034-04a, ASTM F405-97, Standard Specification for Corrugated Polyethylene (PE) Tubing and Fittings, or ASTM F810-01]

20.7.3.702 DESIGN; SEEPAGE PIT; DESIGN AND CONSTRUCTION: Seepage pits should only be installed on sites where conventional disposal systems cannot be installed due to site restrictions.

A. The minimum capacity of seepage pits shall conform to the requirements of 20.7.3.703 NMAC.

B. Multiple seepage pit installations shall be served through an approved distribution box or be connected in series by means of a watertight connection laid on undisturbed or compacted soil. The outlet from each seepage pit shall have an approved vented leg fitting extending at least twelve (12) inches below the inlet fitting.

C. Each seepage pit shall have an excavated horizontal dimension of not less than four (4) feet. Each such pit shall be lined with approved type whole, new, hard-burned clay brick, concrete brick, concrete circular type cesspool blocks or other approved materials.

D. The lining in each seepage pit shall be circular and laid on a firm foundation. Lining materials shall be placed tight together and laid with joints staggered. Except in the case of approved type pre-cast concrete circular sections, no brick or block shall be greater in height than its width and shall be laid flat to form at least a four (4) inch wall. Brick or block greater than twelve (12) inches in length shall have chamfered matching ends and be scored to provide for seepage. Excavation voids behind the brick, block or concrete liner shall have a minimum of six (6) inches of clean three fourths (3/4) inch gravel or rock.

E. All brick or block used in seepage pit construction shall have a minimum compressive strength of twenty-five hundred (2500) pounds per square inch.

F. Each seepage pit shall have a minimum sidewall (not including the arch) of ten (10) feet below the inlet pipe.

G. The arch, cover or dome of any seepage pit shall be constructed in one of the following three ways.

(1) Approved type hard-burned clay brick, solid concrete brick or block laid in cement mortar.

(2) Approved brick or block laid dry. In both of the above methods, an approved cement mortar covering of at least two (2) inches in thickness shall be applied, said covering to extend at least six (6) inches beyond the sidewalls of the pit.

(3) Approved type one or two piece reinforced concrete slab of three thousand (3000) pounds per square inch minimum compressive strength, not less than five (5) inches thick and designed to support an earth load of not less than four hundred (400) pounds per square foot.

H. Each such arch, dome or cover shall be provided with a nine (9) inch minimum inspection hole with plug or cover and shall be coated on the underside with an approved bituminous or other nonpermeable protective compound.

I. The top of the arch, dome or cover must be a minimum of twelve (12) inches but not more than four (4) feet below the surface of the ground. Risers must be provided to extend the arch, dome or cover to within twelve (12) inches of the surface.

J. An approved vented inlet fitting shall be provided in every seepage pit so arranged as to prevent the inflow from damaging the sidewall. When using a one or two piece concrete slab cover inlet, the inlet fitting may be an approved one fourth (1/4) bend fitting discharging through an opening in the top of the slab cover. On multiple seepage pit installations, the outlet fittings shall meet the requirements of Subsection B of 20.7.3.702 NMAC.

K. Prefabricated reinforced 4000 psi concrete seepage pits may be substituted for the designs listed above.

[20.7.3.702 NMAC - Rp, 20.7.3.406 NMAC, 9/1/05; A, 4/1/07]

20.7.3.703 DESIGN; AREA OF DISPOSAL FIELD AND SEEPAGE PITS:

A. The minimum required absorption area in a disposal field in square feet, and in seepage pits in square feet of side wall, shall be predicated on the liquid waste design flow rate and shall be determined by utilizing the following Table 703.1 based on the soil classification found in the proposed location of the disposal field.

B. Two test holes, located at opposite ends of the proposed disposal area, may be required for obtaining the soil profile and as provided in Subsection A of 20.7.3.203 NMAC.

C. A detailed soil profile, in accordance with USDA soil classification methodology, shall be submitted with the liquid waste application for each hole, indicating soil horizons, horizon thickness as a function of depth, and soil texture.

D. USDA soil surveys may be used where available to help assess typical soils in the area of the proposed installation.

E. The required absorption area shall be sized on the most restrictive soil horizon located below and within 4 feet of the bottom the absorption area.

F. Conventional treatment systems shall not be constructed in type Ia soils where the depth to groundwater is less than 30 feet or gravel. For these soils, refer to 20.7.3.605 NMAC.

G. Effluent distribution to type IV soils shall be accomplished with an appropriate treatment and disposal method as approved by the department such as timed low pressure dosed distribution or alternating drainfields-drainfields

H. The required absorption area shall be calculated by the following formula: ABSORPTION AREA = Q X AR, where: Q = the design flow rate in gallons per day; AR = application rate (from Table 703.1)

Table 703.1: Application Rates by Soil Types for Conventional Treatment Systems

Soil Type	Soil Texture	Application Rate (AR) (sq. ft./gal/day)
Ia	Coarse Sand	1.25 (See Subsection F of 20.7.3.703 NMAC)
Ib	Medium Sand, Loamy Sand	2.00
II	Sandy Loam, Fine Sand , Loam	2.00
III	Silt, Silt Loam, Clay Loam, Silty Clay Loam, Sandy Clay Loam	2.00
IV	Sandy Clay, Silty Clay, Clay	5.00 (See Subsection G of 20.7.3.703 NMAC) and Subsection B (4) of 20.7.3.605 NMAC

I. The gravel content of in-place natural soil shall not exceed 30%.

J. Disposal trenches shall conform to the following.

(1) The trench width shall be no less than one foot or no more than three feet.

(2) A minimum of six inches of aggregate shall be placed below the invert of the distribution pipe. ~~to provide surge storage. This area of trench sidewall shall not be used in calculating the absorption area.~~

(3) Up to an additional three feet of aggregate may be placed below the distribution pipe.

(4) The total absorption area shall be calculated utilizing the total trench bottom and sidewall area, ~~excluding the six inches of trench sidewall required in Paragraph (2) of this subsection.~~

(5) The total absorption area shall not exceed seven square feet per linear foot of trench.

(6) A minimum of 300 square feet of absorption area shall be provided for each system exclusive of any hard pan, caliche, rock, clay or other impervious formations.

K. Leaching (absorption) beds are allowed. The absorption area of the bed shall be at least fifty (50) percent greater than the minimum required absorption area for trenches with a minimum of two hundred and twenty-five (225) square feet of bottom area. In addition, leaching beds shall conform to the following.

(1) A minimum of ~~twelve~~ six inches of aggregate shall be placed below the invert of the distribution pipes.

(2) Up to an additional ~~one foot~~ three feet of aggregate may be placed below the distribution pipes.

(3) The total absorption area shall be calculated utilizing the total bed bottom and sidewall area.

L. The minimum effective absorption area in any seepage pit shall be calculated as the excavated side wall area below the inlet pipe exclusive of any hardpan, caliche, rock, clay or other impervious formations and may be provided in one or more seepage pits.

M. For secondary and tertiary treated effluent, the minimum calculated absorption area required for conventional treatment may be reduced 30% and the maximum trench depth may be no greater than 10 feet. In no case shall the maximum reduction for the drainfield absorption area exceed 30%.

N. Disposal systems located in areas of severe cold temperatures and high altitudes shall include design provisions to prevent freezing.

[20.7.3.703 NMAC - Rp, 20.7.3.403 NMAC, 9/1/05; A, 4/1/07]

20.7.3.704 through 20.7.3.800 [RESERVED]

20.7.3.801 DESIGN; ALTERNATIVE DISPOSAL: Alternative disposal systems include, but are not limited to, privies, cluster systems, composting/incinerating toilets, evapotranspiration systems, mounds, elevated systems, alternating drainfields and alternating beds, subsurface irrigation, holding tanks, graywater systems and others as approved by the department.

[20.7.3.801 NMAC - N, 9/1/05; A, 4/1/07]

20.7.3.802 PRIVIES:

A. A privy or outhouse may be used to dispose of non-liquid-carried human excreta directly to the soil. In addition to all setback and clearance requirements in 20.7.3 NMAC, the following conditions are required.

(1) The privy or outhouse is constructed to prevent access by flies or vermin.

(2) The privy or outhouse is located to prevent flooding.

(3) There is sufficient replacement area for two (2) additional pits.

(4) Privy or outhouse pits shall be filled with clean earth when excreta accumulate to within one foot of the ground surface.

(5) No privy or outhouse shall be located on a lot less than 0.75 acre.

B. No person shall install or have installed a privy or outhouse unless that person obtains a permit issued by the department prior to construction of such installation. At the time of application, the total number of privies or outhouses and their replacement locations shall be indicated. When a privy or outhouse pit is filled, the privy or outhouse may be moved to a previously identified replacement location on the same lot without modifying or amending the permit.

[20.7.3.802 NMAC - N, 9/1/05]

20.7.3.803 CLUSTER SYSTEMS:

A. Use of a cluster system may be considered when lot sizes, location or site conditions make conventional disposal unacceptable.

B. Cluster systems shall be designed and constructed in accordance with the requirements of this regulation. In addition, cluster systems shall be maintained in accordance with 20.7.3.902 NMAC.

C. Each user and successors and assignees in interest connected to the system shall be a permittee and shall be indicated on the permit.

D. After the effective date of the regulation, each permittee and successors and assignees in interest on a cluster system shall be a party to a legally binding, written agreement that provides for the service and

maintenance for the life of the system. The agreement shall be recorded in the county in which the property is located. A copy of the agreement shall be provided to the department.

E. The parties to the written agreement shall obtain all necessary rights-of-way, easements or ownership of properties necessary for the operation of the system. All parties ~~that use~~ whose names appear on title to facilities that are connected to the cluster system shall be a party to the agreement.

F. The combined area of the lots served by the cluster system plus the area of the parcel where the system is located, if separated from the lots served, shall be used to determine the allowable lot size.

[20.7.3.803 NMAC - N, 9/1/05; A, 4/1/07]

20.7.3.804 COMPOSTING AND INCINERATING TOILETS:

A. The installation of composting and incinerating toilets certified as meeting ANSI/NSF International Standard 41 shall be permitted.

B. The installation of a composting/incinerating toilet shall not reduce the design flow or lot size for the property.

~~C. Composting/incinerating toilets shall not be used on a lot less than 0.75 acre.~~

[20.7.3.804 NMAC - N, 9/1/05]

20.7.3.805 IRRIGATION/REUSE SYSTEMS:

A. Effluent used for irrigation shall meet secondary treatment standards.

B. The effluent may only be utilized subsurface.

C. Application of the effluent resulting in standing or ponding of the effluent, whether liquid or frozen, shall be prohibited. The application of effluent shall not result in the effluent leaving the application area.

D. Irrigation systems shall have no direct cross connections, ~~direct or indirect~~, with potable water systems.

E. All irrigation systems shall be pressure dosed to assure an even distribution and loading of effluent throughout the application area.

F. All parts of the reuse system shall be protected from freezing.

G. Effluent shall be contained on the permitted property.

H. The effluent shall be applied to a suitable landscaped area.

I. Secondary treated and disinfected effluent may be used for toilet flushing or fire suppression with department approval.

J. Setback requirements for irrigation systems shall meet the requirements of 20.7.3.302 NMAC except for the following:

- (1) property lines, 2 feet for disposal area; and
- (2) building or structure, 2 feet for disposal area.

K. A back up redundant conventional disposal system shall be provided for times when irrigation is not able to function due to freezing. The back up system shall have an minimum absorption area of 25% of the standard required absorption area based upon design flow. No reductions in the minimum 25% absorption area for advanced treatment or proprietary products are allowed for the back up system.

[20.7.3.805 NMAC - N, 9/1/05; A, 4/1/07]

20.7.3.806 EVAPOTRANSPIRATION SYSTEMS:

A. Evapotranspiration systems shall consist of a treatment unit and an evapotranspiration bed (ET bed) for disposal. Effluent discharged to an ET bed shall not exceed 200 mg/l of BOD. Evapotranspiration systems shall meet the requirements of 20.7.3.302 NMAC. Unlined ET beds are a discharging system and shall meet the clearance, set back and lot size requirements for conventional absorption systems. Lined ET beds are nondischarging systems and shall be underlain by a liner as specified in Paragraph (3) of Subsection L of 20.7.3.7 NMAC and shall provide for a leak detection method.

B. The minimum bottom area of ET beds shall be determined from the following formula:

$A = 391 \times Q \div E_L$, where: A = the bottom area of the bed in square feet; Q = the design flow in gallons per day; and E_L = the average annual ~~lake~~ pan evaporation for the site in inches per year. In addition the formula shall be adjusted to account for a climatically-averaged, monthly water balance during months of minimal evaporation. The water balance calculation is $V = \text{Inflow} - \text{Outflow}$ where inflow is the monthly design flow + precipitation, in gallons; Outflow is the minimum monthly evaporation (in gallons).

C. The average annual ~~lake~~ pan evaporation shall be determined from the map "Gross Annual Lake Evaporation, New Mexico", USDA, April 1972, or successor version Class A land pan evaporation data recorded for each month from the weather station which best represents climatological conditions in the study area.

Measurements of monthly and annual evaporation from U.S. Weather Bureau Class A land pans from NOAA or a mutually acceptable evaporation rate.

D. The minimum bed depth shall be twenty four (24) inches as measured from the bottom of the ET bed to the overflow level. The surface crowning, which increases runoff from the ET bed, is above the overflow level of the ET bed. Maximum ET bed depth shall be thirty (30) inches. The bottom of the ET bed shall be level.

E. The ET bed location shall be in an area where exposure to the sun and wind will be maximized.

F. The distribution piping within the ET bed shall be embedded in gravel and covered meeting the specifications in 20.7.3.701 NMAC. Use of approved proprietary drainfield products may be used in lieu of pipe and gravel.

G. The capillary sand fill shall contain eighty five (85%) or more sand; the percentage of silt plus one and one-half times the percentage of clay shall not exceed fifteen percent (15%). Fine to medium sand is preferred. Native soil may not be used.

H. A loamy sand shall be used for the surface crown. Where a loamy sand is not available, capillary sand may be used.

I. The crown surface shall be planted with vegetation suited to the climate and soil of the site and to the wastewater quality and quantity.

J. For a gravity feed system the overflow height of the ET bed shall be lower than the invert of the septic tank outlet.

K. All ET beds shall be equipped with an inspection port that is suitable to use to pump the system, if needed.

M. All ET Beds shall be fitted with an overflow pipe that empties into a holding tank that meets all the requirements of 20.7.3.809.

[20.7.3.806 NMAC - N, 9/1/05]

20.7.3.807 MOUND AND ELEVATED SYSTEMS:

A. Mound systems shall meet the requirements of 20.7.3.302 NMAC.

B. Mounds are generally constructed entirely above the surrounding ground surface, however, the mound may be partially buried.

C. The design of the mound system shall be in accordance with the most current design standards of the Wisconsin mound system, or other system designs as approved by the department.

D. Pressure distribution to the mound shall be required.

E. An elevated system shall meet the requirements of 20.7.3.302 NMAC.

F. Elevated systems may be constructed entirely above the surrounding grade or partially buried, as site conditions require.

G. An elevated system must be installed in accordance with proven design criteria and approved by the department.

[20.7.3.807 NMAC - N, 9/1/05; A, 4/1/07]

20.7.3.808 LOW PRESSURE DOSED DISPOSAL SYSTEMS:

A. Low pressure dosed (LPD) disposal systems may be used to achieve uniform distribution of wastewater over the entire infiltrative surface. Effluent from this type of system is pumped under low pressure through solid pipe into perforated lateral lines installed within a disposal system.

B. Low pressure dosed disposal systems may be used with any on site liquid waste system including conventional treatment systems, gray water systems and advanced treatment systems.

C. Low pressure dosed disposal systems may be used with any disposal system including trenches, beds, mounds, gravelless systems, evapotranspiration systems and drip irrigation.

D. Lift stations are not classified as low pressure dosed disposal systems.

E. Low pressure dosed disposal systems may use a timer to equalize the flow over a 24-hour period. LPD disposal systems may also be designed to rotate between separate disposal areas by using rotator valves.

F. Low pressure dosed disposal systems may use dosing siphons or pumps.

G. All pumps shall be rated by the manufacturer for pumping sewage or effluent.

H. A single pump may be used for design flows equal to or less than 1,000 gpd. Dual pumps are required for design flows over 1,000 gpd.

I. Design of the system shall include:

(1) design flow;

(2) except for mound systems, soil absorption area sized according to the effluent loading rates found in 20.7.3.703 NMAC;

(3) spacing between lines with a minimum of 2 feet of separation;

(4) length of pipe;

(5) diameter of perforated lateral lines used;

(6) size and spacing of holes or emitters; and

(7) pump performance sizing with allowances for head and friction losses at rated flows in gallons per minute.

J. A ball valve shall be located vertically at the end of each lateral line for inspection and flushing except for proprietary drip irrigation systems.

K. Approved proprietary drip irrigation systems and proprietary low pressure dosed systems shall be designed and installed according to manufacturer's or proprietary system designer's specifications and 20.7.3.805K NMAC.

L. Low Pressure Pipe (LPP) disposal systems are approved. A LPP system is a pressurized distribution system placed in shallow, narrow trenches. LPP system trenches shall be 12 to 18 inches wide and 12 to 18 inches deep. LPP systems may use natural or proprietary aggregate as well as proprietary drainfield products. LPP systems shall be covered with geotextile material to prevent soil intrusion. A minimum of 4 inches and a maximum of 10 inches of soil cover over the LPP system trench is required. Sizing for LPP systems is 5 square feet of absorption area per linear foot of lateral pipe.

L.M. Lateral lines shall be placed parallel to the natural contours of the site.

M.N. The distribution holes in the lateral lines shall be shielded or protected in some manner to prevent the infiltration of soil into the pipe.

[20.7.3.808 NMAC - N, 9/1/05; A, 4/1/07]

20.7.3.809 HOLDING TANK REQUIREMENTS:

A. The installation of holding tanks for the disposal of liquid wastes shall be authorized on a temporary basis only and only for residential units where conventional or alternative liquid waste treatment systems cannot be installed, except where noted in paragraph E below.

B. The installation of holding tanks shall not be authorized for commercial units.

C. Holding tanks shall not be installed to serve any design flow greater than 375 gallons per day, except to replace an existing holding tank. Replacement of existing holding tanks is a modification and shall meet the requirements of 20.7.3. Total design flow on any property served by a holding tank shall not exceed 375 gallons per day.

D. The installation of holding tanks shall be authorized for no more than one (1) year from the date of installation for units occupied more than one hundred twenty (120) days per calendar year.

E. The installation of holding tanks shall be authorized for permanent use only for the following:

(1) residential units, with a design flow rate of 375 gpd or less, occupied one hundred twenty (120) days or less per calendar year; Utility bills for electricity, telephone and natural gas or propane for each calendar year shall be provided to the department annually, no later than February 15, as a permit condition for these units.

(2) residential units utilizing the holding tank only for the discharge of toilet waste and kitchen waste in conjunction with a conventional treatment system for the remainder of the wastewater; Systems utilizing holding tanks that receive only toilet waste must be monitored and tested for total nitrogen in compliance with 20.7.3.603 NMAC.

(3) non-residential, non-commercial units, such as guard shacks, toll booths, etc., with a design flow rate of 100 gpd or less; and

(4) the collection of RV wastes and portable toilet wastes for disposal in accordance with 20.7.3.306 NMAC.

F. Holding tanks shall be constructed of the same materials, by the same procedures and to the same standards as described in 20.7.3.501-502 NMAC except that they shall have no discharge outlet.

G. All holding tank installations shall be tested on site for water tightness.

H. The minimum size of a holding tank shall be 1000 gallons or four (4) times the design flow, whichever is greater.

I. Holding tanks shall be located in an area readily accessible to a pump vehicle under all weather conditions and where accidental spillage during pumpage pumping will not create a nuisance or a hazard to public health.

J. Holding tanks shall be protected against flotation under high ground water conditions by weight of tank (ballasting), earth anchors or by surface or shallow installation. Holding tanks shall be protected from freezing.

K. Holding tanks shall be equipped with a visible and audible high water alarm system placed in a conspicuous location approved by the department. The alarm shall be set to activate at 80% of the tank capacity. It shall be a violation of these regulations to tamper with or disconnect the alarm system.

L. The owner of a holding tank shall have the tank pumped to prevent discharge from the tank and the liquid waste (septage) properly disposed of in compliance with all applicable laws and regulations. Owners of holding tanks shall maintain records demonstrating pumping and proper disposal of septage from the units to prevent discharge. Copies of pumping and disposal manifests shall be retained by the owner for at least seven years and shall be made available to the department for inspection on request. The records shall be:

- (1) kept on a form provided by the department if requested;
- (2) accompanied by such other documentation as the department may reasonably require;
- (3) signed by the lot owner or an authorized representative; and
- (4) submitted on a semi-annual basis, ~~or a schedule otherwise determined by the department~~, to the department field office having jurisdiction.
- (5) be included in any transfer inspection report or unpermitted system inspection report.

M. No person shall install, operate, modify or maintain a holding tank that allows discharge to the soil or to waters of the state.

N. The department may perform site inspections periodically to ensure that a holding tank does not discharge.

O. All residential and commercial units utilizing a holding tank shall connect to a public sewer upon availability and in accordance with the local authority that has jurisdiction. A public sewer shall be deemed available when the public sewer is located in any thoroughfare, right-of-way or easement abutting the lot on which the residential or commercial unit is located. The holding tank shall be properly abandoned in accordance with 20.7.3.307 NMAC within 30 days of connection to the public sewer.

[20.7.3.809 NMAC - Rp, 20.7.3.305 NMAC, 9/1/05]

20.7.3.810 GRAYWATER DISCHARGES: Graywater discharge of less than 250 gallons per day of private residential graywater originating from a residence for the resident's household flower gardening, composting or landscaping irrigation shall be allowed if:

A. a constructed graywater distribution system provides for overflow into the sewer system or on-site wastewater treatment and disposal system;

B. a graywater storage tank is covered to restrict access and to eliminate habitat for mosquitos or other vectors;

C. a graywater system is sited outside of a floodway;

D. graywater is vertically separated at least five feet above the ground water table;

E. graywater pressure piping is clearly identified as a nonpotable water conduit;

F. graywater is used on the site where it is generated and does not run off the property lines;

G. graywater is discharged in a manner that minimizes the potential for contact with people or domestic pets;

H. ponding is prohibited, discharge of graywater is managed to minimize standing water on the surface and to ensure that the hydraulic capacity of the soil is not exceeded;

I. graywater is not sprayed;

J. graywater is not discharged to a watercourse;

K. graywater use within municipalities or counties complies with all applicable municipal or county ordinances enacted pursuant to Chapter 3, Article 53 NMSA 1978;

L. graywater is not stored longer than 24 hours before being discharged;

M. graywater use for purposes other than irrigation or composting is prohibited, unless a permit for such use is issued by the department;

N. graywater is not used to irrigate food plants except for fruit and nut trees;

O. graywater is discharged to a mulched surface area or to an underground irrigation system;

P. graywater is not discharged closer than 100 feet to a watercourse or private domestic well, or closer than 200 feet to a public water supply well;

Q. graywater does not create a public nuisance;

R. for residential units using an on-site liquid waste system for blackwater treatment and disposal, the use of a graywater system does not change the design, capacity or absorption area requirements for the on-site liquid waste system at the residential unit, and the on-site liquid waste system is designed and sized to handle the combined blackwater and graywater flow if the graywater system fails or is not fully used; and

S. graywater does not contain hazardous chemicals derived from activities such as cleaning car parts, washing greasy or oily rags or disposing of waste solutions from home photo labs or similar hobbyist or home occupational activities.

[20.7.3.810 NMAC - Rp, 20.7.3.310 NMAC, 9/1/05]

20.7.3.811 GRAYWATER SYSTEMS: Graywater systems not meeting the requirements of 20.7.3.810 NMAC shall meet the following requirements:

A. The installation of separate graywater systems shall be authorized for residential units and shall be located on the lot served. The capacity of the on-site liquid waste system, including required replacement area, shall not be decreased or otherwise affected by the existence or proposed installation of a graywater system servicing the lot.

B. All information required in 20.7.3.402 NMAC for the issuance of a permit shall be required.

C. Design flows for graywater systems shall be calculated by the following:

- (1) Twenty percent (20%) of the total design flow for the segregation of laundry waste; and
- (2) ~~Thirty-three~~ Fifty percent (~~33~~ 50%) of the total design flow for the segregation of the bathroom (showers, tubs and wash basin) waste.

D. For graywater systems on lots where the residential unit is served by a sewerage system, the minimum lot size set forth in 20.7.3.301 NMAC shall not be required.

E. Clearance requirements for graywater systems shall meet the requirements of 20.7.3.303 NMAC.

F. Setback requirements for graywater systems shall meet the requirements of 20.7.3.302 NMAC except for the following:

- (1) property lines, two (2) feet for disposal area;
- (2) building or structure, two (2) feet for disposal area; and
- (3) building or structure, zero (0) feet for above ground tanks.

G. A treatment unit shall be required for all graywater systems. If a tank is utilized as the treatment unit:

- (1) the tank may be a single compartment;
- (2) the tank shall be sized to accommodate one day design flow; and
- (3) access to the tank shall be provided by a tamper resistant lid installed at grade.

Graywater should be utilized within twenty-four (24) hours of collection unless additional treatment is provided.

H. Tanks installed below ground shall meet the requirements of 20.7.3.501-502 NMAC except for the requirements stated in Paragraph G of this section. Tanks shall be protected against possible floatation.

I. Above ground tanks shall be constructed of solid durable materials, not subject to corrosion or decay and shall be approved by the department. Above ground tanks shall be set on a three inch (3") minimum concrete pad. Metal tanks shall not be authorized.

J. All tanks shall have an overflow drain with a permanent connection to the building drain, ~~or building sewer, or disposal system~~. The tank shall be protected against sewer line backflow by a backwater valve.

K. Each tank shall be vented as required by chapter 9 of the uniform plumbing code.

L. Each tank shall have its rated liquid capacity permanently marked on the unit. In addition, a sign "GRAYWATER SYSTEM, DANGER – UNSAFE WATER" shall be permanently marked on the tank.

M. The disposal system shall be constructed in accordance with 20.7.3.805 NMAC.

N. The graywater system shall have no direct or indirect cross connections with potable water systems.

O. Graywater use for purposes other than irrigation, fire protection, or toilet flushing is prohibited. Irrigation of edible food crops is prohibited.

[20.7.3.811 NMAC - N, 9/1/05; A, 4/1/07]

20.7.3.812 PUMP STATIONS AND EQUIPMENT:

A. Pump stations or pump chambers shall be watertight and shall be constructed of concrete, plastic, fiberglass or other approved material. Tanks and chambers shall be designed and constructed so as to serve their intended purpose and appropriately coated to resist corrosion.

B. All valves, motors, pumps, aerators and other mechanical or electrical devices shall be located where they will be accessible for inspection and repair at all times and protected with a locking removable cover. Access to the piping and electrical wiring to the valves, motors, pumps, and aerators shall be provided within six inches of the ground surface or top of the riser.

C. Pump stations or pump chambers shall be equipped with both audible and visual alarms, or remote and visual alarms, for high water and pump failure. All alarm and control circuits shall be on a separate circuit from pumps and shall be contained in weather-proof control boxes or located inside a building or other weather proof structure or enclosure. Alarms shall be placed in a conspicuous location approved by the department.

D. Pump tanks shall be sized at a minimum of 75% of design flow for demand systems and 100% of design flow for flow equalization systems.

[20.7.3.812 - Rp 20.7.3.402 NMAC, 9/1/05]

20.7.3.813 BUILDING SEWER:

A. The building sewer connects the building drain to the septic tank or liquid waste treatment unit. Horizontal building sewer piping shall be run in practical alignment and a uniform slope of not less than one-fourth (1/4) of an inch per foot or two percent (2%) toward the point of disposal provided that where it is impractical due to the structural features or arrangement of any building or structure to obtain a slope of one-fourth (1/4) of an inch or two percent (2%), any such pipe or piping four (4) inches in diameter or larger may have a slope of not less than one-eighth (1/8) of an inch per foot or one percent (1%), when first approved by the department.

B. Each horizontal sewer pipe shall be provided with a cleanout at its upper terminal and each run of pipe that is more than one hundred (100) feet in length shall be provided with a cleanout for each one hundred (100) feet or fraction thereof. Cleanouts shall be installed pursuant to the uniform plumbing code (UPC).

C. Sewer piping shall be an approved material having a smooth uniform bore. ~~Vitrified clay pipe or fittings shall not be used above ground or where pressurized by a pump or ejector. Vitrified clay pipe or fittings shall be a minimum of twelve (12) inches below ground.~~

[20.7.3.813 - Rp, 20.7.3.402 NMAC, 9/1/05]

20.7.3.814 through 20.7.3.900 [RESERVED]

20.7.3.901 MONITORING:

A. As a condition to any permit, the owner of a on-site liquid wastes system shall permit department personnel right of entry to the property at reasonable times to allow for effluent sampling or evaluating the general state of repair or function of the system.

B. On-site liquid waste systems that require secondary treatment levels be achieved shall be sampled and analyzed only for 5-day BOD quarterly for the first year, semi-annually for the second year, and yearly thereafter or as otherwise required by the department to meet the requirements of the permit. Chemical oxygen demand (COD) may be substituted for BOD5 with an acceptable calibration curve as approved by the department.

C. On-site liquid waste systems that require tertiary treatment levels be achieved shall be sampled and analyzed only for total nitrogen quarterly for the first year, semi-annually for the second year, and yearly thereafter or as otherwise required by the department to meet the requirements of the permit.

Field instruments may be used as an alternative to laboratory analyses for TN constituents in accordance with the following protocol.

1. Field instruments shall be operated in accordance with the manufacturer's instruction manual.
2. Factory prepared standards and blanks of de-ionized water shall be used to draw calibration curves with a minimum of two points (see example in Table 1 and Figure 1). At least one calibration curve shall be prepared for each lot number of chemical reagents used.
3. Field tests may include all of the TN constituents, or may be limited to nitrate and ammonia with correction factors for nitrite and organic nitrogen to calculate TN.
4. The first of each six consecutive effluent samples shall undergo both field and laboratory testing. Both sets of test results shall be reported to NMED.
5. If field tests include all TN constituents, each constituent also shall be included in the laboratory tests.
6. If field tests are limited to nitrate and ammonia, laboratory tests shall include nitrate plus nitrite, and TKN, and the following correction factors for nitrite and organic nitrogen shall be applied to calculate TN.
 - a. The nitrite correction factor shall be the laboratory value for nitrate plus nitrite, minus the field value for nitrate.
 - b. The organic nitrogen correction factor shall be the laboratory value for TKN, minus the field value for ammonia.
 - c. If a correction factor of less than zero is calculated, a correction factor of zero shall be used.
 - d. TN shall be calculated as the sum of field nitrate, field ammonia, and the correction factors for nitrate and organic nitrogen.

Table 901.1. Nitrate as Nitrogen (NO₃-N) Calibration Data (mg/L).

	DI WATER	STANDARD SOLUTION
Actual value	0.0	10.0
Test result	0.5	10.1

Figure 1. NO₃-N Calibration Data.

D. Advanced systems requiring disinfection shall be sampled and analyzed for fecal coliform quarterly for the first year, semi-annually for the second year, and yearly thereafter or as otherwise required by the department. In addition:

(1) when chlorine is used for disinfection, the total chlorine residual, at all times, shall be equal to or greater than 1.0 mg/l after thirty (30) minutes detention time at peak flows; and

(2) alternative disinfection methods, such as ultraviolet light, ozone or other methods, may be utilized after department approval.

E. All sampling and analysis shall be performed by certified personnel in accordance with the most current edition of *standard methods for the examination of water and wastewater* or other methods, including field instruments, approved by the department.

F. Sampling shall occur between the hours of 7:00 am and 7:00 pm.

G. Monitoring reports shall be submitted to the local field office within thirty (30) days of the required sampling event.

H. All test results exceeding the permit limits shall be reported to the local field office within five (5) working days.

I. Sampling frequency shall be quarterly for the first year, semi-annually for the second year, and yearly thereafter, unless otherwise specified in the permit.

J. If any two consecutive samples exceed the single sample limit, the system design and operation shall be evaluated by a professional engineer or a maintenance service provider for conformance with permitting conditions and shall be adjusted to bring the effluent quality into compliance. The system shall be resampled no later than 30 days from the evaluation and results submitted to the department as soon as they become available from the lab.

K. If the 6-sample rolling average exceeds the treatment standards specified in 20.7.3.602 and 603 NMAC, the treatment system shall be subject to review and re-evaluation with regard to operation and maintenance. A department approved contingency plan, including more training for the maintenance service provider or replacement with a more experienced operator, may shall be implemented. If a more experienced operator or training does not bring the effluent quality into compliance, the manufacturer shall provide its own operator to bring the system into compliance. If the manufacturer's operator is unable to bring the system into compliance the permittee shall be issued a notice of violation and the department shall immediately refer the system to the WTAC

for review. If the WTAC finds that the system itself is incapable of producing the required effluent quality then the system must be replaced with a system that is approved for producing the required effluent quality.

- L. The following shall be considered as violations of the monitoring requirements of the permit.
- (1) Failure to collect, analyze and report sampling results.
 - (2) The submission, by the owner or maintenance entity of an advanced treatment system or agent or employee thereof, of misleading or inaccurate information to the department, through neglect.
 - (3) The submission of fraudulent data including the following:
 - (a) apparent measurement results for which no measurement or test results were actually made as determined by the absence of the supporting records that are usually made;
 - (b) measurements or test results obtained by deliberately and knowingly making measurements or collecting samples at places and times other than as specified in the permit or 20.7.3 NMAC except that the permit schedule may be amended to reflect periodic occupancy or prolonged vacancy; and
 - (c) test results obtained through use of unapproved and erroneous sampling, preservation, storage or analysis procedures.

[20.7.3.901 NMAC - N, 9/1/05]

20.7.3.902 OPERATION AND MAINTENANCE REQUIREMENTS AND INSPECTION REQUIREMENTS AT TIME OF TRANSFER:

A. The owner of an on-site liquid waste system, including systems existing prior to the effective date of this regulation, shall be responsible for properly operating and maintaining the system in accordance with the recommendations of the manufacturer or designer of the system.

B. The owner of an advanced treatment system or any on-site liquid waste treatment and disposal system that utilizes a pump installed after the effective date of this regulation or required by a prior version of 20.7.3 shall enter into a department-approved legally binding, notarized maintenance contract with a maintenance service provider that will assure maintenance of the system in accordance with the recommendations of the manufacturer or designer of the system. A maintenance contract shall be in effect at all times.

C. Household hazardous waste ~~and high-strength waste~~ shall not be introduced into the system. High strength waste may be treated by an appropriately designed advanced treatment system

D. Any spillage that may occur during tank pumpout shall be cleaned up immediately and the spill area disinfected with a sodium or calcium hypochloride solution.

E. Prior to the transfer of a property with an existing permitted conventional on-site liquid waste system, the current system owner shall have the system inspected and evaluated by ~~an~~ a currently certified third party inspector utilizing a department approved form. If the system is a permitted advanced treatment unit, the inspection shall be conducted by a currently certified third party inspector who is approved and trained by the manufacturer of the system. If the advanced treatment system is unpermitted, the inspection shall be performed by a currently certified inspector from the department and a certificate of registration or permit application shall be submitted to the department in accordance with Subsection J or K of 20.7.3.401 NMAC.

(1) the system shall be sampled in accordance with permit conditions for compliance with 20.7.3.602-604 NMAC if a regularly scheduled sampling event has not occurred within 180 days of the inspection; the sampling results shall be included with the system report; if a regularly scheduled sampling event has occurred within 180 days of the inspection, the results of the sampling shall be included in the inspection report; and

(2) an amendment of permit reflecting ownership change is required pursuant to Subsection E of 20.7.3.403 NMAC.

(3) if a final inspection for a new system or a property transfer inspection for an existing system has been done within 180 days of the transfer of the property, the property transfer inspection need not be conducted.

F. Inspections shall be recorded on forms approved by the department. Inspection reports shall be kept on file by the inspector of the on-site liquid waste system. Inspectors shall submit to the department copies of all inspection reports, whether completed or not, within 15 days of the inspection. A permit or variance application shall be submitted within 15 days of the inspection to correct any deficiencies or permit violations identified by the inspection. In addition, all inspection reports shall include the global positioning system (GPS) coordinates of the tank. Once an inspection is requested, all results, whether complete or not, shall be submitted to the department.

G. In the event of a failed or illegal system, that includes, but is not limited to disposal fields, the owner shall apply for a permit within 15 days and shall remedy the failed or illegal system with department approval.

H. In the event no transfer inspection is performed in a property transfer subject to 20.7.3 NMAC, the department shall forward the names of all real estate licensees involved in the violation to the New Mexico Real Estate Commission.
[20.7.3.902 NMAC - N, 9/1/05; A, 4/1/07]

20.7.3.903 MAINTENANCE SERVICE PROVIDERS (MSP) FOR CONVENTIONAL AND ADVANCED ON-SITE LIQUID WASTE SYSTEMS:

- A. Maintenance service providers (MSP) shall at a minimum:
- (1) obtain certification by the national association of waste transporters (NAWT), New Mexico Utility Operator's Certification Program for wastewater operators or equivalent;
 - (2) inspect, operate and maintain the system in accordance with the manufacturer's specification; and
 - (3) submit pumping and inspection records upon request to the department
 - (4) Possess a valid, appropriate contractor's license issued by the construction industries division
- B. The MSP personnel shall be certified by the manufacturer for the proprietary unit being maintained.
- C. The MSP personnel shall be trained by the manufacturer in the proper operation and maintenance of the system.
- D. The MSP personnel shall have the ability to sample the unit in accordance with approved sampling methods under this part.
- E. The MSP shall have in place a standardized quality assurance/quality control (QA/QC) plan.
- F. The MSP shall be able to respond to emergency situations within forty-eight (48) hours of being notified.
- G. A public MSP shall adopt an ordinance, bylaw or rule, as appropriate, approved by the department, detailing the terms and conditions of service.
- H. A private MSP shall use a contract for service that contains, at least, minimum standards approved by the department.
- I. The MSP shall meet minimum requirements, as promulgated by the department, for effective operation, such as:
- (1) reasonable response time;
 - (2) appropriate equipment;
 - (3) parts inventory;
 - (4) quality assurance/quality control plan; and
 - (5) insurance as required by the contractor's licensing law, including workers comp.
- J. The MSP shall notify the department of any failed or illegal system.

[20.7.3.903 NMAC - N, 9/1/05]

20.7.3.904 REQUIREMENTS FOR CERTIFICATION:

- A. The department will develop a certification program by July 1, 2007 that addresses the specifications below and as provided by law. After July 1, 2009: The department shall assign to the Utility Operator Certification Program of the department the duty of adopting, developing, administering, and implementing the certification program on the effective date of this regulation and
- (1) any person offering services pertaining to an on-site liquid waste system, including site evaluator, system designer, ~~installer, wastewater-reuse-irrigator~~, system designer, inspector, maintenance service provider, consultant or seepage pumper, shall be certified after completing a program and passing an exam approved adopted by the department Utility Operator Certification Program;
 - (2) employees of the department reviewing, approving or inspecting on-site liquid waste systems shall be certified as department liquid waste specialist after completing a program and passing an exam approved adopted by the department Utility Operator Certification Program; and
 - (3) a homeowner shall complete a program and pass an exam approved adopted by the department Utility Operator Certification Program prior to the issuance of a permit for a homeowner installed system.
- B. General requirements for certifications of persons involved in the liquid waste program are specified below.
- (1) Site evaluators shall demonstrate competence in soil evaluation to determine acceptable liquid waste disposal application rates and identify potential areas of concern, such as fractured bedrock, shallow ground water and karst terrain.

(2) Liquid waste system designers that configure conventional treatment systems and approved proprietary advanced systems shall demonstrate competence in configuration of on-site liquid waste systems, certification by the manufacturer of approved systems proposed and a basic understanding of the treatment and disposal process.

~~(3) Installers shall possess a valid, applicable New Mexico contractor's license and demonstrate competence in the installation of on-site liquid waste systems.~~

~~(a) An installer 1 shall demonstrate competence in the installation of conventional treatment and disposal systems and holding tanks.~~

~~(b) An installer 2 shall demonstrate competence in all forms of on-site liquid waste systems. An installer 2 must have at least 3 years of installation experience, 30 hours of approved coursework and certified by the manufacturer of approved systems they install.~~

(3) Consultants shall complete a program and pass an exam adopted by the Utility Operator Certification Program prior to offering any consulting services regarding on-site liquid waste disposal and treatment systems

~~(4) Wastewater reuse irrigation service providers shall possess a valid, applicable New Mexico contractor's license and demonstrate competence in the configuration, installation, operation and maintenance of wastewater irrigation systems and the protection of public health.~~

(5) (4) Inspectors shall demonstrate competence in the inspection of on-site liquid waste systems. Certification by the national association of waste transporters (NAWT), NSF international or a department-approved program is demonstration of competence in the inspection of conventional treatment and disposal systems.

(6) (5) Maintenance service providers (MSP) shall demonstrate competence in the operation and maintenance of on-site liquid waste systems. Persons providing service shall follow department procedures for MSP and shall be certified by the manufacturer of the systems they operate and maintain.

(7) (6) Septage pumpers shall demonstrate familiarity with applicable regulations and demonstrate competence in locating and exposing septic tanks, measuring septic tank sludge and scum levels, the complete pumping of septic tank sludge, maintenance of pumping equipment in a sanitary condition, prevention of pathogen transmission and preparation of an appropriate safety plan for normal operations.

(8) (7) Manufacturers of approved advanced treatment systems shall provide training and certification for their systems at least once per year. Manufacturers may charge reasonable fees for their training and certification.

C. Limitations on scope of services.

(1) Liquid waste system designers may only configure conventional treatment systems, approved proprietary advanced treatment systems and conventional, proprietary and alternative disposal systems described in 20.7.3 NMAC.

~~(2) Installer 1 may only install conventional treatment systems and conventional disposal systems that do not involve dosing or other mechanical distribution systems.~~

~~(3) Installer 2 may install all forms of on-site liquid waste systems.~~

(2) Consultants shall not offer any consultation concerning services or activities for which a contractor's license is required unless the consultant possesses the appropriate contractor's license issued by the construction industries division of New Mexico.

D. Expiration and renewal of certifications and establishment of fees.

(1) Certifications are valid for a period up to three (3) years and shall expire on December 31 of the third year of issuance.

(2) Renewal of certifications require completion of at least 8 hours of continuing education units per year ~~approved~~ adopted by the department Utility Operator Certification Program.

(3) The department shall establish fees for the initial application and renewal of certifications.

E. Suspension, revocation and denials.

(1) ~~The department~~ Utility Operator Certification Program may suspend or revoke a certification for cause. Failure to provide service in accordance with the certification shall be grounds for revocation of the certification.

(2) ~~The department~~ Utility Operator Certification Program may deny certification if it determines that an applicant does not meet all requirements of this part or has violated any provision of these regulations.

~~F. Education steering committee. The secretary shall appoint an education steering committee. The committee shall consist of at least one representative of each classification for which certification is required and one department-appointed member. The committee shall meet monthly until sufficient classes for all categories of certification are approved. Thereafter the committee shall meet semi-annually or as required for the purpose of~~

certification reviews of sponsors, courses and instructors and shall make recommendations to the secretary as to findings.

~~_____~~ G. ~~Approval of sponsors.~~

~~_____~~ (1) ~~All sponsors wishing to offer department approved courses for credit must be approved by the secretary prior to accepting students.~~

~~_____~~ (2) ~~Educational institutions, proprietary schools, professional organizations, internet-based training providers or businesses wishing to become department approved sponsors must submit an application for department approval.~~

~~_____~~ (3) ~~The department shall maintain a list of approved sponsors.~~

~~_____~~ (4) ~~An approved sponsor shall comply with the following requirements.~~

~~_____~~ (a) ~~Conduct all courses in accordance with department rules and regulations and education policies.~~

~~_____~~ (b) ~~Permit the department or its representative access to classes being conducted and make available to the department, upon request, all information pertaining to the activities of the sponsor.~~

~~_____~~ (c) ~~Advertise at all times in a manner free from misrepresentation, deception or fraud.~~

~~_____~~ (d) ~~Prominently display the current certificate of sponsorship in the main office of the sponsor as registered with the department.~~

~~_____~~ (e) ~~In the event a sponsor ceases operations while students are enrolled who have not completed their program of study, submit within thirty (30) days a list of students enrolled at the time of closure, the amount of tuition paid, the status of course work in progress and all other student records.~~

~~_____~~ (f) ~~Maintain current, complete and accurate student records and instructor critiques or summaries, which shall be accessible at all times to the department or its authorized representatives. These records shall include, but not be limited to, a record of payments made, a record of attendance and a record of course work completed.~~

~~_____~~ (g) ~~Conduct all courses in accordance with course content requirements approved by the department.~~

~~_____~~ (h) ~~Certify no student as successfully completing a pre certification course unless the student has attended at least 75% of the classroom instruction and has passed the course.~~

~~_____~~ (i) ~~Certify no certificate holder as successfully completing approved certification or continuing education course unless they have attended at least 90% of the classroom instruction.~~

~~_____~~ (j) ~~Advise the department of change of address and telephone number.~~

~~_____~~ (k) ~~Reapply for sponsorship in event of change of majority ownership.~~

~~_____~~ (l) ~~Notify the department in writing of change of directorship.~~

~~_____~~ (m) ~~Renew sponsorship approval every three (3) years.~~

~~_____~~ (5) ~~Failure to comply with this rule may result in the loss of sponsor approval.~~

~~_____~~ H. ~~Approval of courses.~~

~~_____~~ (1) ~~All pre certification and continuing education courses shall be approved by the secretary.~~

~~_____~~ (2) ~~All courses shall be offered in accordance with established department course content requirements.~~

~~_____~~ (3) ~~All approved courses are subject to periodic review by the department.~~

~~_____~~ I. ~~Approval of instructors.~~

~~_____~~ (1) ~~All instructors shall be approved by the secretary.~~

~~_____~~ (2) ~~All instructor candidates shall complete an application for department review.~~

~~_____~~ (3) ~~All instructor candidates must be prepared to make a minimum fifteen (15) minute presentation to the education steering committee.~~

~~_____~~ (4) ~~An approved instructor shall comply with the following requirements:~~

~~_____~~ (a) ~~conduct all classes in accordance with department rules and regulations and education policies;~~

~~_____~~ (b) ~~insure that all instruction is free from misrepresentation;~~

~~_____~~ (c) ~~instruct in accordance with department approved course content requirements;~~

~~_____~~ (d) ~~allow access to any class to any duly appointed representative of the department;~~

~~_____~~ (e) ~~renew approval biannually as prescribed by the department; instructor approval expires on December 31 of each even numbered year;~~

~~_____~~ (f) ~~certify to the sponsor a true and correct record of student attendance; and~~

~~_____~~ (g) ~~failure to comply with this section may result in the loss of instructor approval.~~

[20.7.3.904 NMAC - N, 9/1/05; A, 4/1/07]

20.7.3.905 TECHNICAL ADVISORY COMMITTEE: Technical product review and approval shall be in accordance with 9-7A-15 NMSA 1978.

[20.7.3.905 NMAC - Rp, 20.7.3.8 NMAC, 9/1/05]

20.7.3.906 ADMINISTRATIVE ENFORCEMENT:

A. Any violation of these regulations is a petty misdemeanor subject to criminal penalties as authorized by NMSA 74-1-10.

B. The department may appear and prosecute any misdemeanor proceeding if the appearance is by an employee authorized by the secretary, in writing, to institute or cause to be instituted an action on behalf of the department.

C. The secretary, at his discretion, may elect to pursue criminal or civil penalties, or both, for any violations of these regulations.

D. Upon any violation of these regulations, the department may:

(1) issue a compliance order stating the nature of the violation requiring compliance immediately or within a specific time period and assess a civil penalty for any past or current violation or both; Past violations must be based on the regulations in effect at the time of the infraction; and no enforcement action can taken more than two years after sworn discovery by the department; or

(2) commence a civil action in district court for appropriate relief, including a temporary or permanent injunction.

E. Any penalty assessed in the compliance order for residential on-site liquid waste systems shall not exceed one hundred dollars (\$100) for each violation.

F. Any penalty assessed in the compliance order for non-residential on-site liquid waste systems shall not exceed one thousand dollars (\$1000) for each violation.

G. If a violator fails to achieve compliance within the time specified in the compliance order, the secretary shall assess civil penalties of not more than one thousand dollars (\$1000) for each noncompliance with the order and no new permit applications shall be processed or approved for the violator until all penalties are paid in full.

H. A compliance order issued pursuant to this section shall become final unless, no later than thirty (30) days after the compliance order is served, the party named in the order submits a written request to the secretary for a hearing.

I. All requests for hearings shall be in accordance with 20.7.3.406 NMAC.

J. Penalties collected pursuant to violations of 20.7.3 NMAC shall be deposited in the state treasury to be credited to the general fund.

K. Any noncompliance with any provision of 20.7.3 NMAC or any permit provision may be subject to penalties.

L. Upon any violation of these regulations or the government conduct act by the department or its employees, the affected party may commence a civil action against the department in district court for appropriate relief, including a temporary or permanent injunction or any other action as permitted by law.

M. The department shall report all incidents involving unlicensed or improperly licensed contractors to the construction industries division of the regulation and licensing bureau of the State of New Mexico for investigation.

[20.7.3.906 NMAC - N, 9/1/05]

20.7.3.907 AUTHORITY TO DISCONNECT SOURCE OF WATER SUPPLY: After due process is provided, the department may disconnect the source of water supply to a commercial or residential unit that is served by any on-site liquid waste system that has become a failed system and that presents an imminent hazard to public health. This authority includes authority to disconnect power utilities if necessary to disconnect the source of water supply. The department shall give notice of its actions to the unit owner and the tenants affected or as otherwise provided by the law.

[20.7.3.907 NMAC - Rp, 20.7.3.8 NMAC, 9/1/05; A, 4/1/07]

20.7.3.908 through 20.7.3.1000 [RESERVED]

20.7.3.1001 CONSTRUCTION: 20.7.3 NMAC shall be liberally construed to carry out its purpose.

[20.7.3.1001 NMAC - Rp, 20.7.3.501 NMAC, 9/1/05]

20.7.3.1002 TEMPORARY PROVISIONS: All legally issued registration certificates, permits, orders, rulings and variances issued pursuant to the regulations in effect at the time such registration certificates, permits, orders, rulings, or variances were issued shall, except for those that violate 20.7.3.401.P, remain in full force and effect until repealed, replaced, superseded or amended pursuant to 20.7.3 NMAC.

[20.7.3.1002 NMAC - Rp, 20.7.3.502 NMAC, 9/1/05]

20.7.3.1003 SEVERABILITY: If any provision or application of 20.7.3 NMAC is held invalid, the reminder, or its application to other situations or persons, shall not be affected.

[20.7.3.1003 NMAC - Rp, 20.7.3.503 NMAC, 9/1/05]

20.7.3.1004 REFERENCES IN OTHER REGULATIONS: Any reference to the liquid waste treatment and disposal regulations in any other rule shall be construed as a reference to 20.7.3 NMAC.

[20.7.3.1004 NMAC - Rp, 20.7.3.504 NMAC, 9/1/05]

20.7.3.1005 SAVINGS CLAUSE: Repeal or supersession of prior versions of the liquid waste disposal regulations shall not affect any administrative or judicial action for the enforcement thereof.

[20.7.3.1005 NMAC - Rp, 20.7.3.505 NMAC, 9/1/05]

20.7.3.1006 COLLATERAL REQUIREMENTS: Compliance with 20.7.3 NMAC does not relieve any person from the responsibility of meeting more stringent valid city or county regulations or ordinances or other requirements of state or federal laws governing the treatment or disposal of liquid waste unless those city or county regulations or ordinances are in violation of 74-1-14 NMSA 1978. The department shall not knowingly issue a permit that violates a city or county regulation issued in compliance with 74-1-14 NMSA 1978.

[20.7.3.1006 NMAC - Rp, 20.7.3.506 NMAC, 9/1/05]

20.7.3.1007 LIMITATIONS OF DEFENSE: The existence of a valid permit for installation or modification of an on-site liquid waste system shall not constitute a defense to a violation of any section of 20.7.3 NMAC except the requirement for obtaining a permit (20.7.3.401-404 NMAC).

[20.7.3.1007 NMAC - Rp, 20.7.3.507 NMAC, 9/1/05]

20.7.3.1008 to 20.7.3.1100 [RESERVED]

HISTORY OF 20.7.3 NMAC:

Pre-NMAC History: The material in this part was derived from that previously filed with the commission of public records - state records center and archives.

EIB 73-4, Liquid Waste Disposal Regulations, filed 9/19/73.

EIB 79-7-2, Liquid Waste Disposal Regulations, filed 8/7/79.

EIB/LWDR 1, Liquid Waste Disposal Regulations, filed 10/10/85.

EIB/LWDR 2, Liquid Waste Disposal Regulations, filed 12/19/89.

History of Repealed Material: 20 NMAC 7.3, Liquid Waste Disposal (filed 10-27-95) repealed 11-30-95.
20.7.3 NMAC, Liquid Waste Disposal (filed 1/09/04) repealed 9/01/05.

Other History:

EIB/LWDR 2, Liquid Waste Disposal Regulations (filed 12/19/89) renumbered, reformatted and replaced by 20 NMAC 7.3, Liquid Waste Disposal, effective 11/30/95.

20 NMAC 7.3, Liquid Waste Disposal (filed 10/27/95) replaced by 20 NMAC 7.3, Liquid Waste Disposal, effective 10/15/97.

20 NMAC 7.3, Liquid Waste Disposal (filed 10/27/97) renumbered, reformatted, amended and replaced by 20.7.3 NMAC, Liquid Waste Disposal, effective 3/01/04.

20.7.3 NMAC, Liquid Waste Disposal (filed 1/09/04) replaced by 20.7.3 NMAC, Liquid Waste Disposal and Treatment, effective 9/01/05.
